

# Designing Interactions for Novel Haptic Technologies

Vincent Lévesque

Postdoctoral Research Scientist  
Immersion Corp.

## Rate Control

- pref + desc  
event w/ visuals

Haptics Symposium  
March 4-7, 2012 | Vancouver, Canada

Interaction Design Workshop

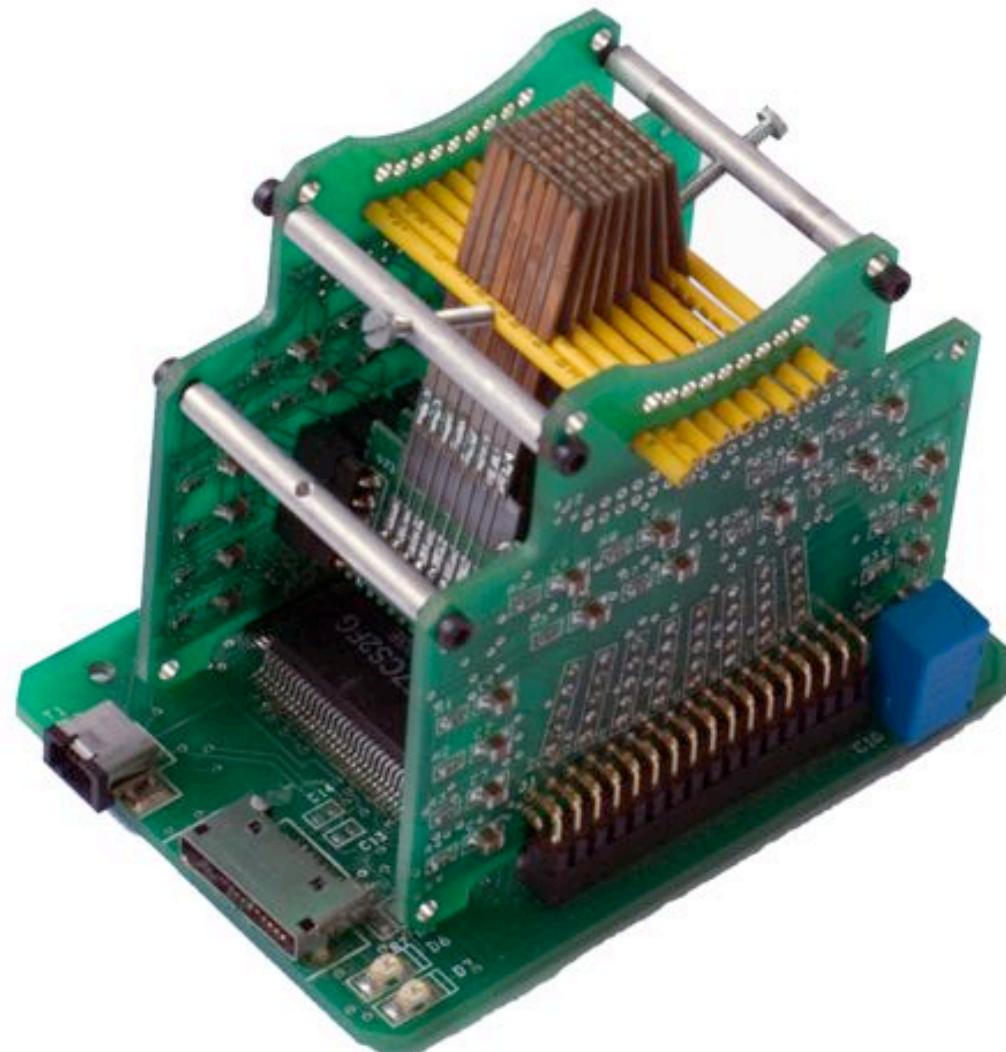

# Novel Haptic Technologies

**Challenges**

**hardware design**

**psychophysics  
& human factors**

**applications**

Q. Wang, V. Hayward. Compact, Portable, Modular, High-performance, Distributed Tactile Transducer Device Based on Lateral Skin Deformation. Proc. HAPTICS'06.

# **Novel Haptic Technologies**

## **Typical Approach**

**1 – optimize hardware design**

**2 – study psychophysics  
& human factors**

**3 – investigate applications**

# **Great but...**

**slow process**

**applications come late**

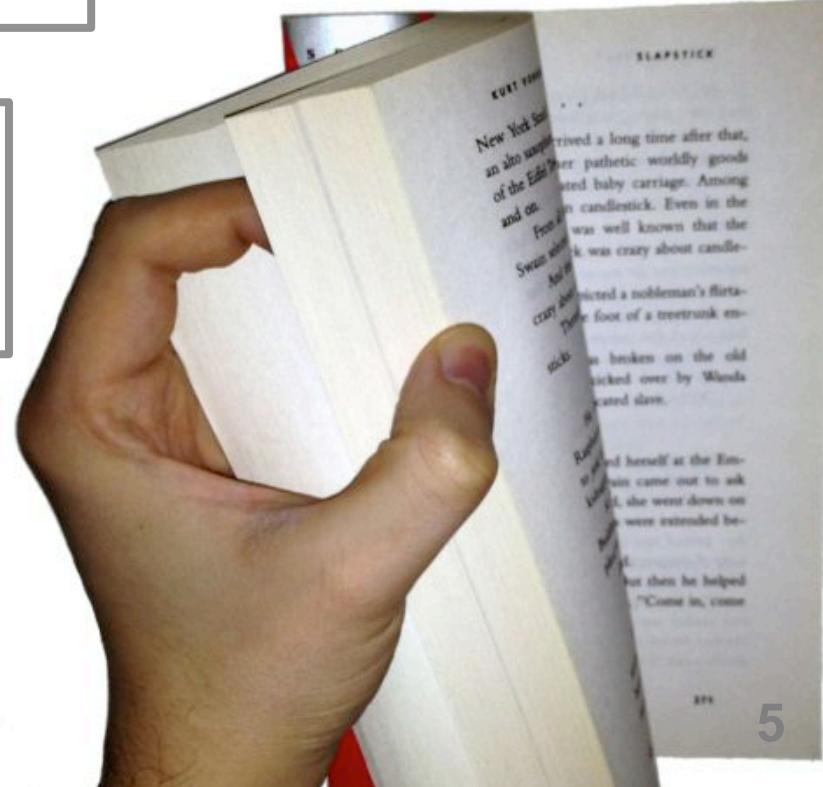

**risk of abandonment**

# **Alternative Approach**

**Sneak peak to the end...**

**consider applications early**

**justify investments in  
hardware design  
& human factors studies**

# My Experience...

## Laterotactile Displays

**tactile graphics**

**Braille**

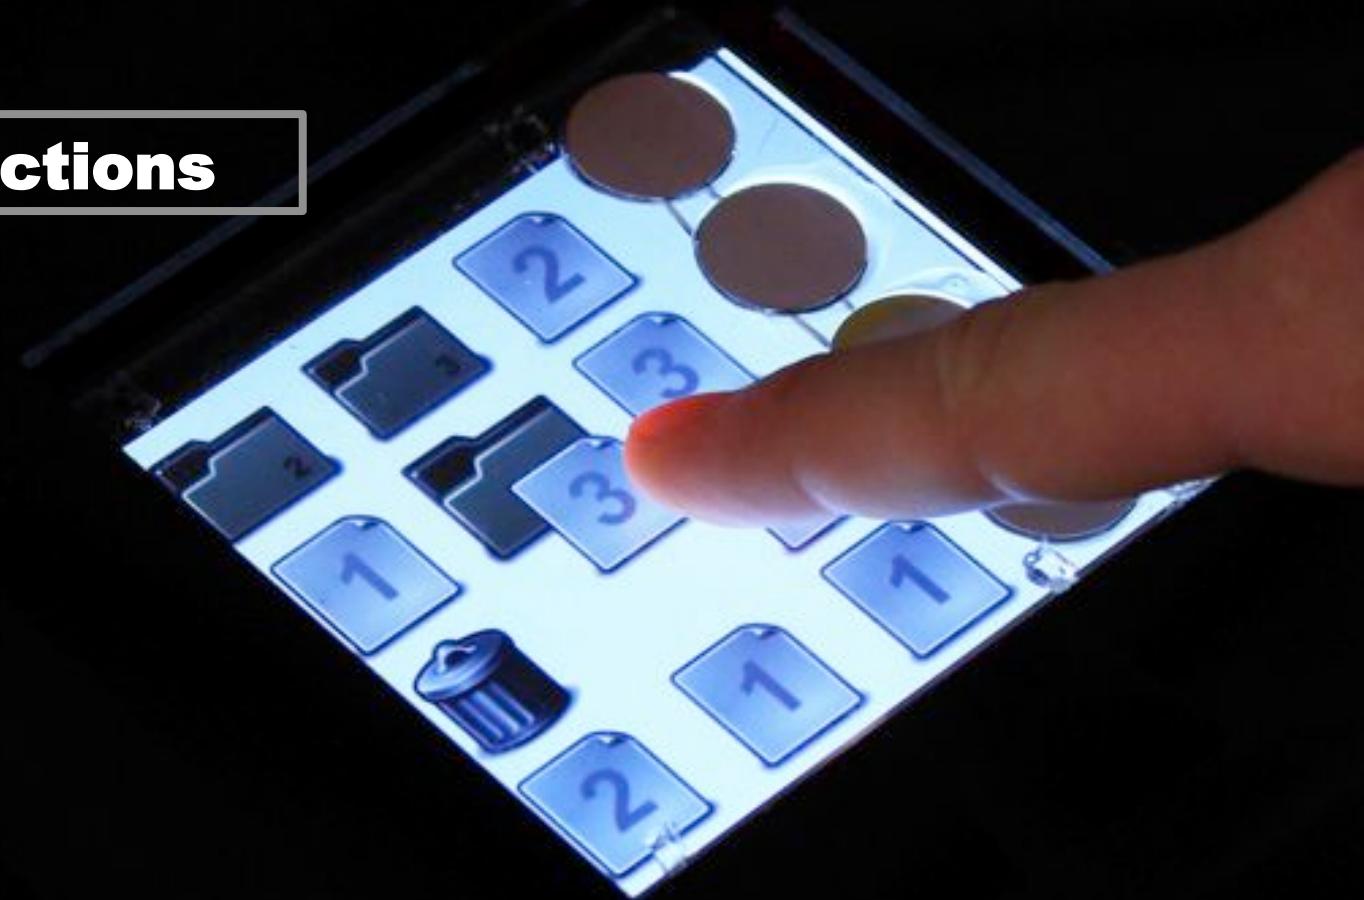

**McGill**

Collaborators: Vincent Hayward, Qi Wang, Jerome Pasquero, Gregory Petit, Aude Dufresne

# My Experience...

## Programmable Friction

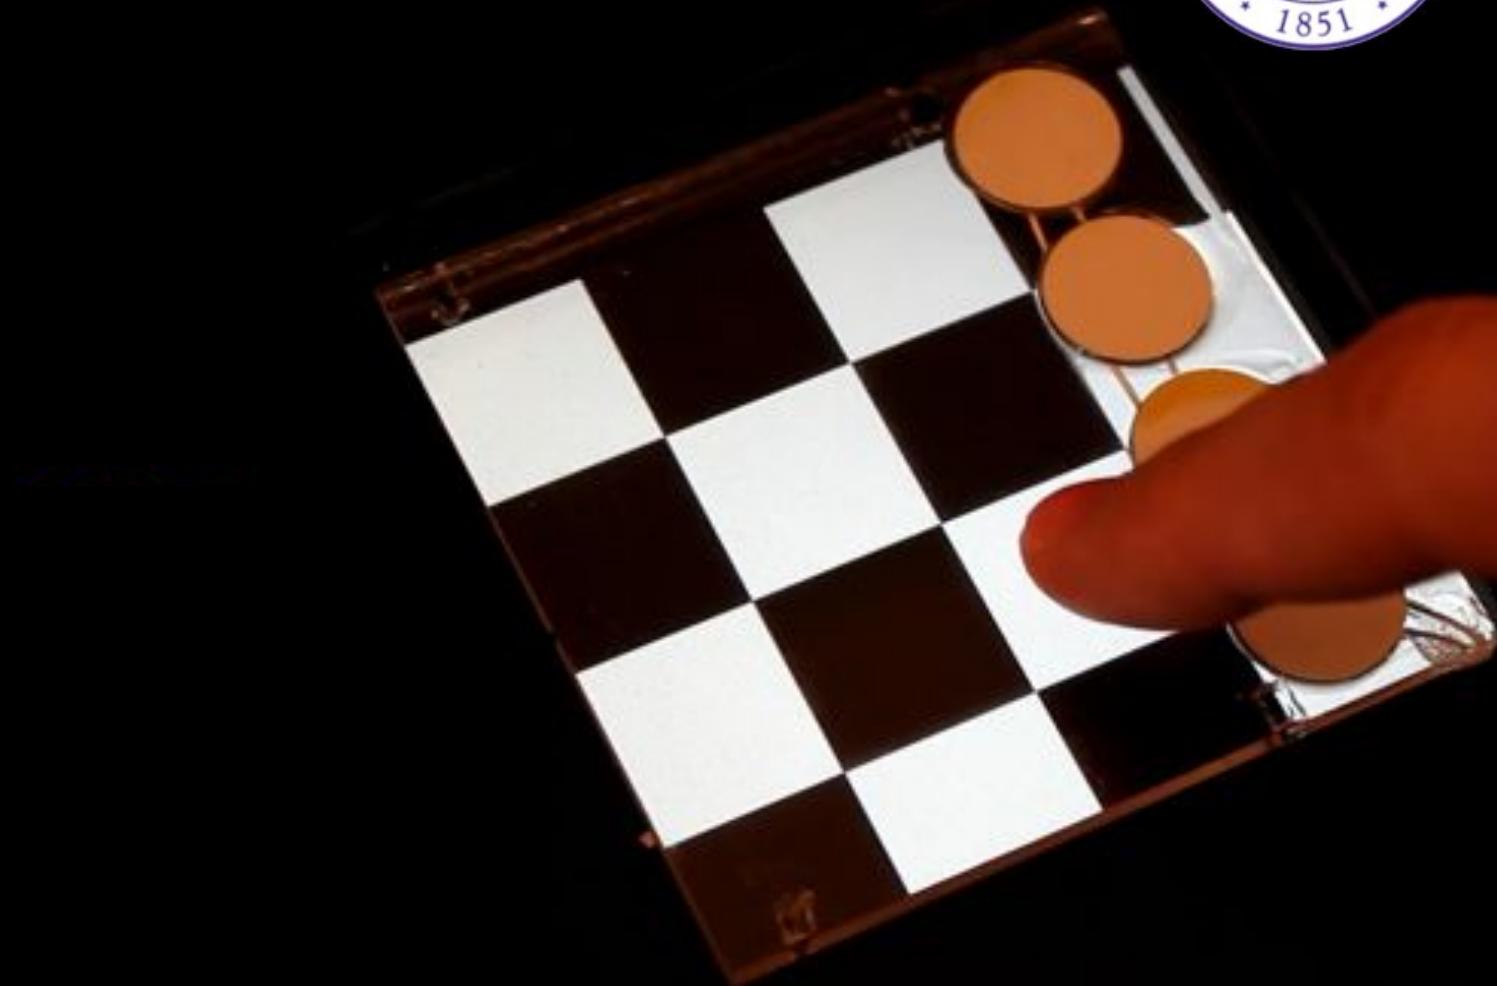

**touch interactions**

Collaborators: Karon MacLean, Ed Colgate, Michael Peshkin, Andy Cockburn,  
Louise Oram, Nicolas Marchuck, Dan Johnson

# Programmable Friction

N. Marchuk, J. E. Colgate, M.I Peshkin (2010) Friction Measurements on a Large Area TPaD,  
Proc. HAPTICS'10.

**applications?**

**psychophysics?**

**hardware refinements?**

**Where do we start?**

# Collaboration

## Hardware Design

**Ed Colgate, Michael Peshkin,  
Nicolas Marchuck, Dan Johnson**

## Interaction Design

**Karon MacLean, Andy Cockburn,  
Vincent Levesque, Louise Oram**

# Inspiration

## Everyday Interactions

# Inspiration

Make some regions more touchable than others

Use textures to mark regions  $\Rightarrow$  language

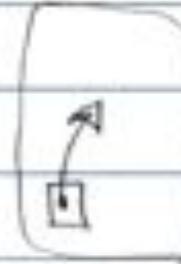

mark some keys

indicate progress/  
action registered

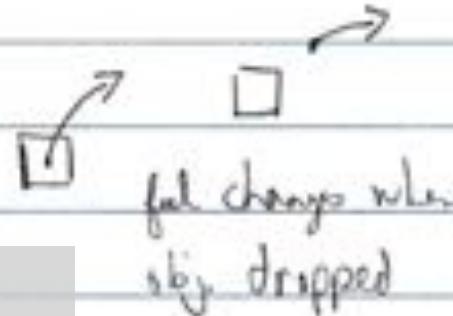

$\rightarrow$  clicks on tx

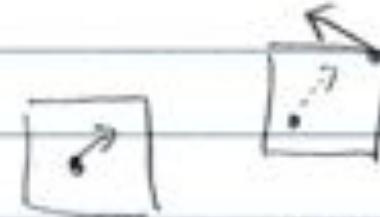

feel motion

feedback when  
action fails

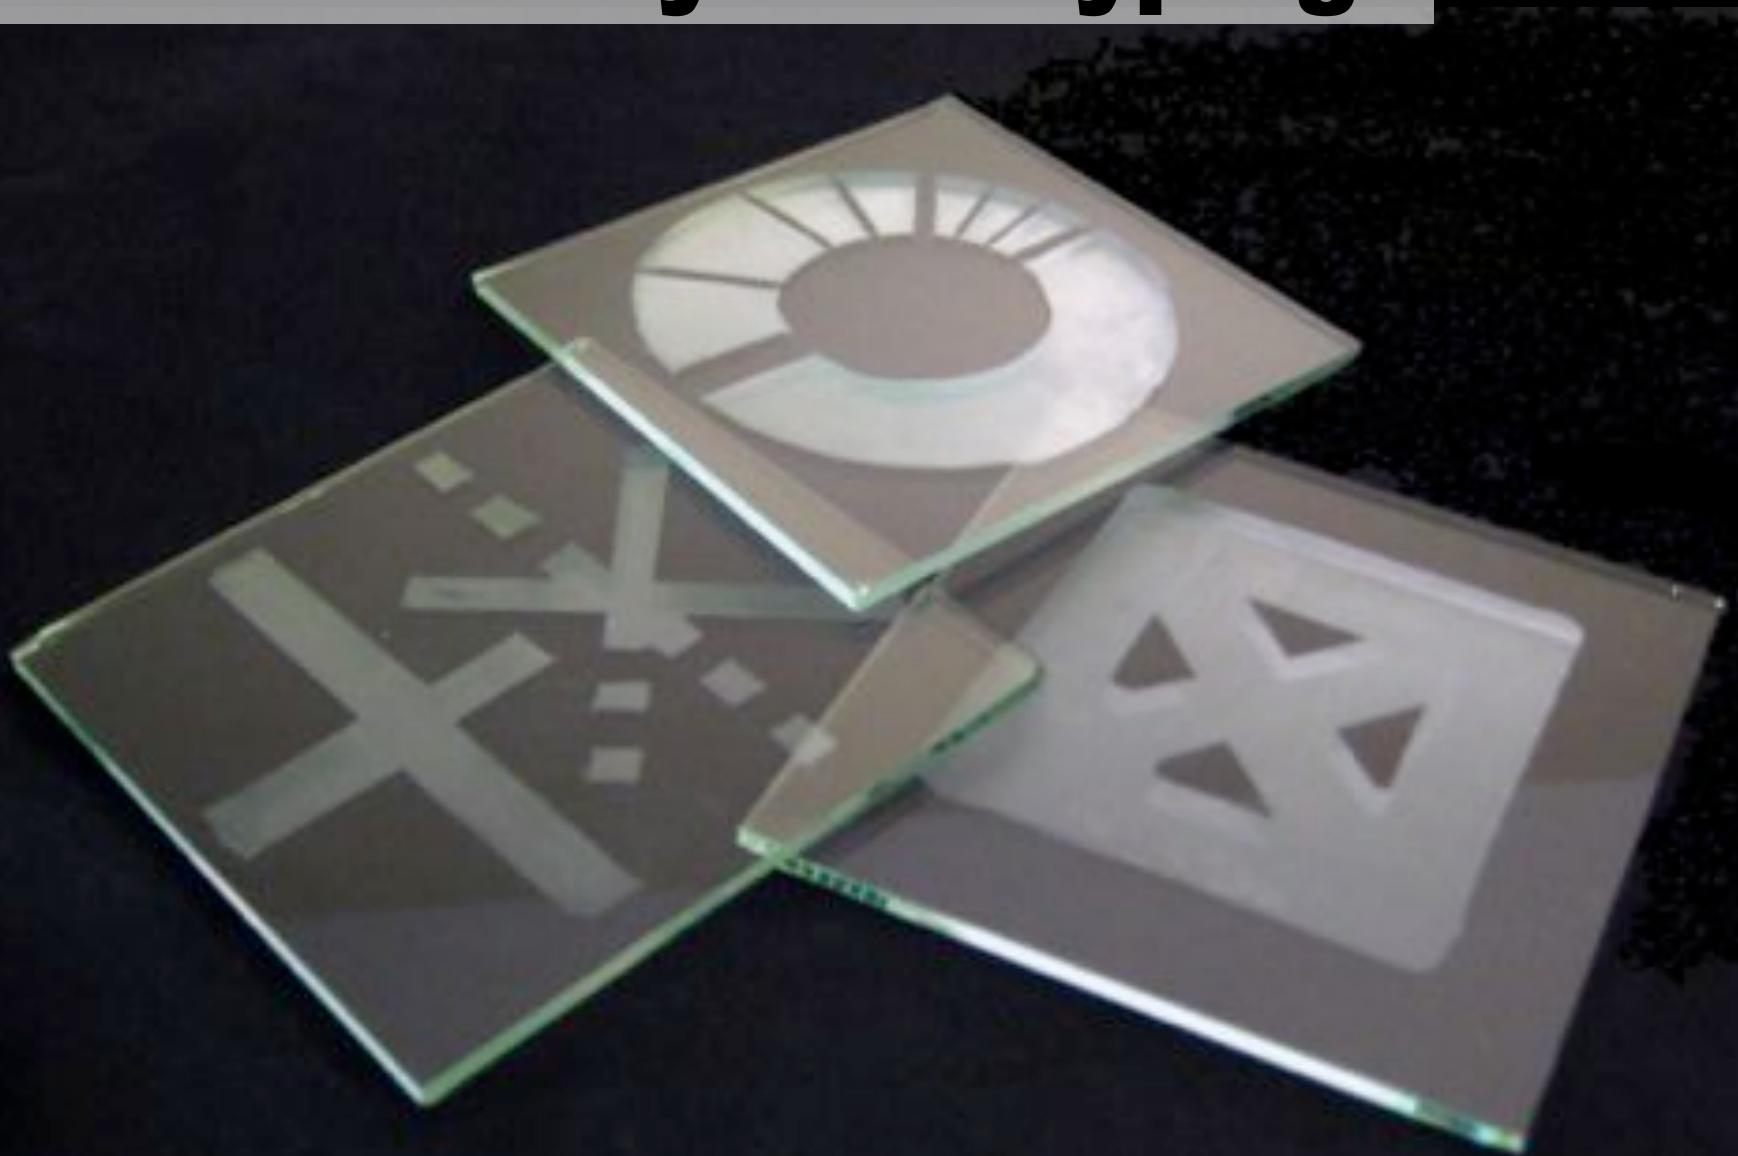

fail change when  
obj. dropped

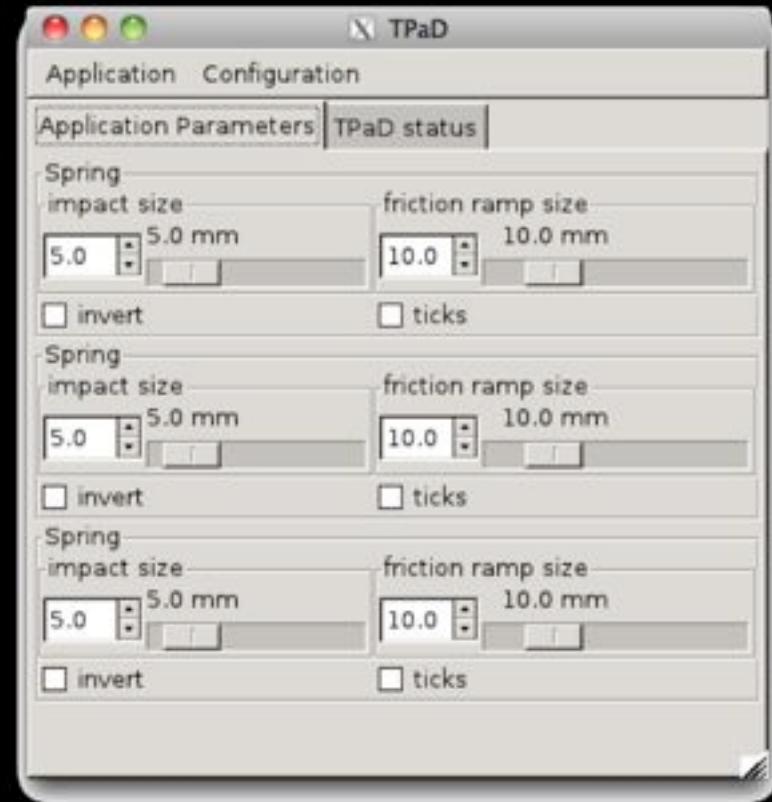

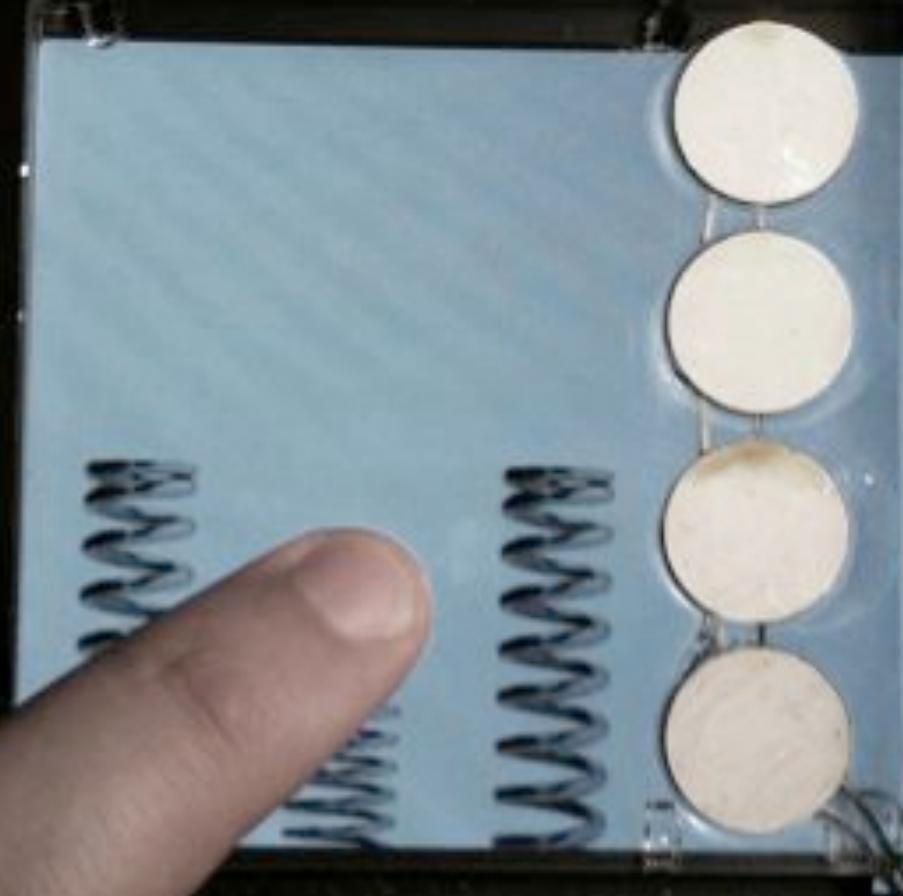

someone  
use touch  
+ 14

# Sketching

# Low-Fidelity Prototyping

# Software Sketches

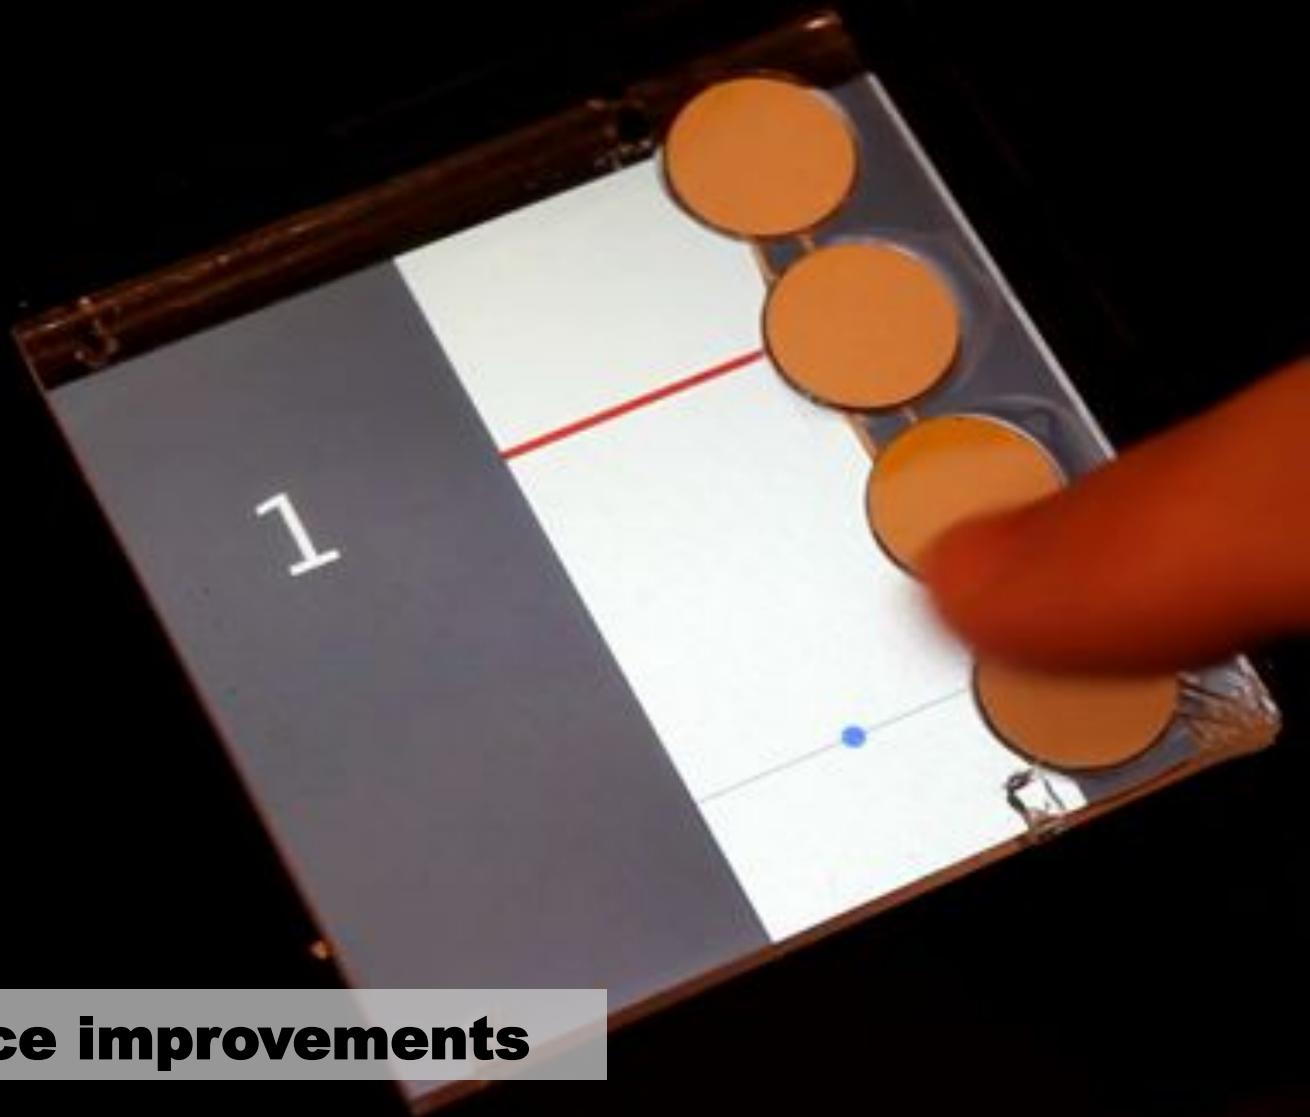

# Experiments

**Performance  
studies 1-3**

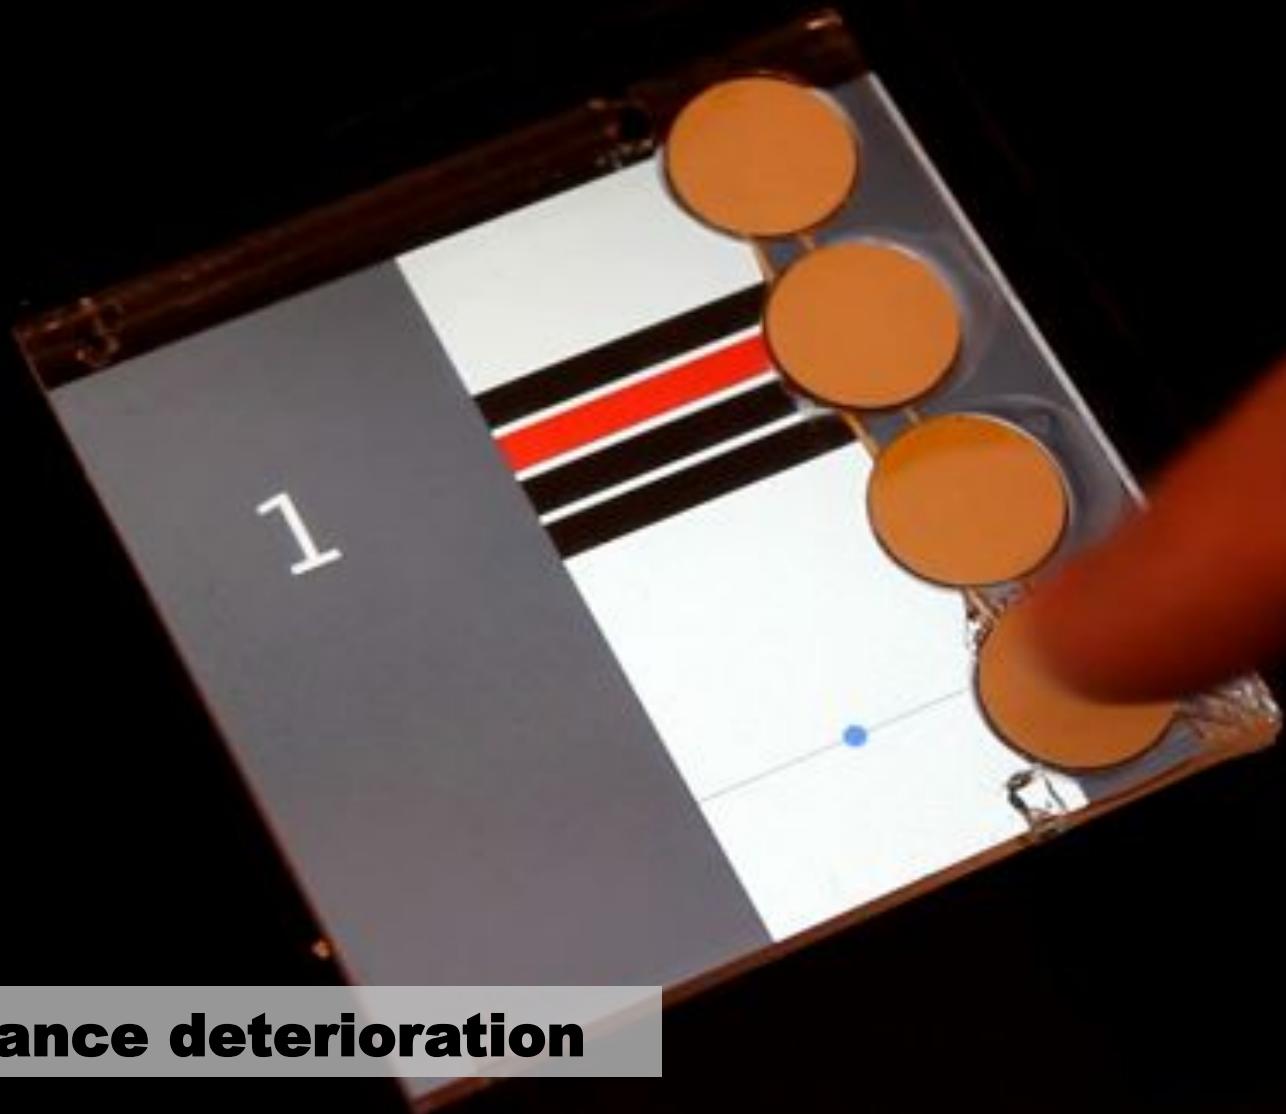

**User Experience  
study 4**

# Target Selection Study 1

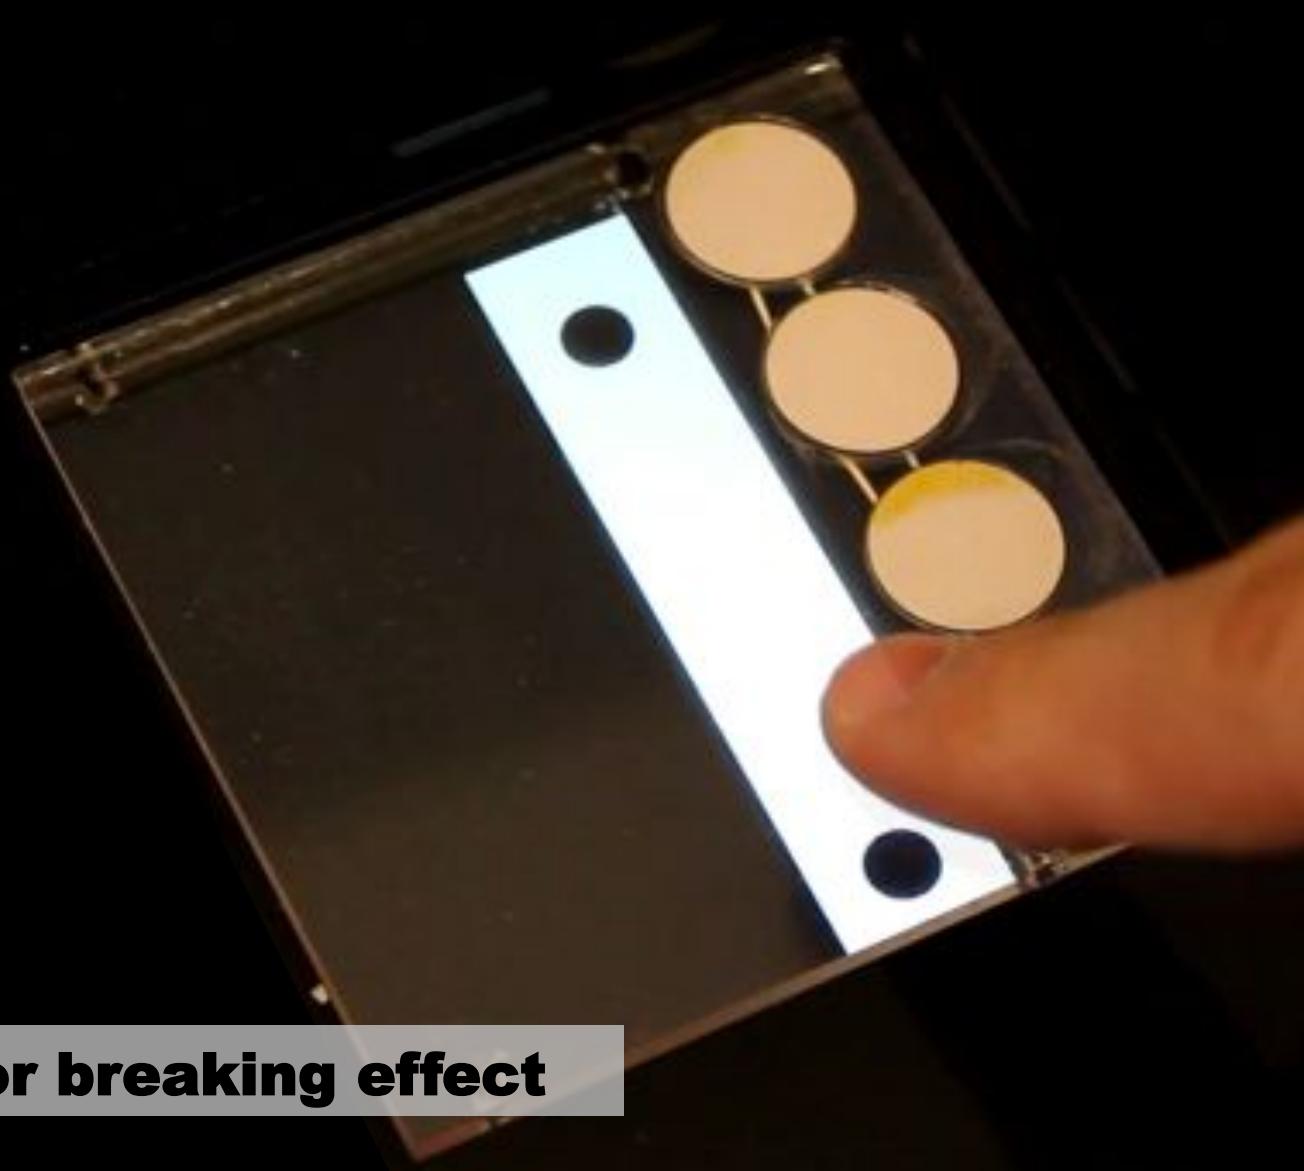

→ performance improvements

# **Effect of Distractors** Study 2

→ no performance deterioration

# Mechanical Effect Study 3

→ evidence for breaking effect

# User Experience Study 4

**12 participants**

**4 applications**

alarm clock

file manager

game

text editor

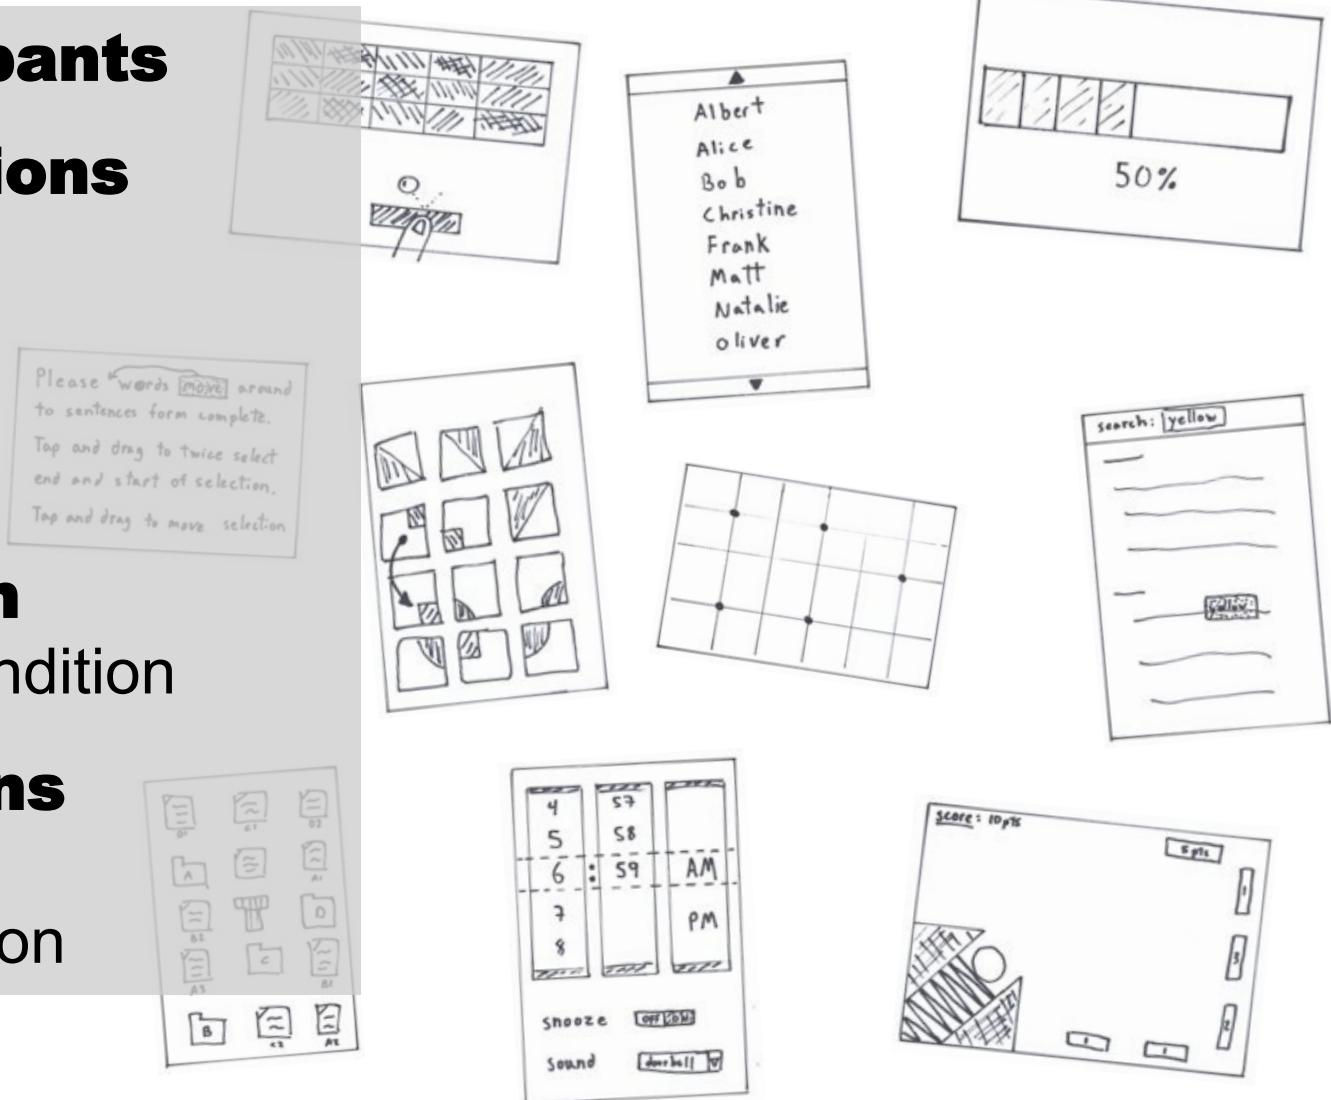

**interaction**

2 min per condition

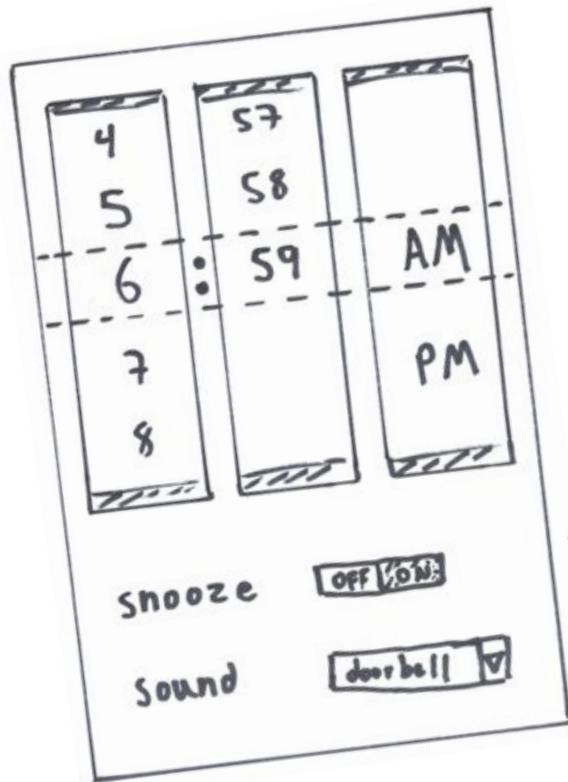

**2 conditions**

high friction

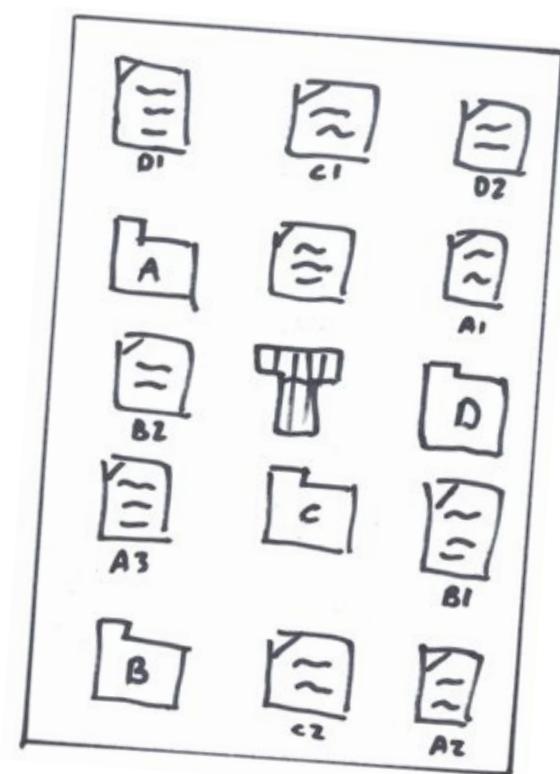

variable friction

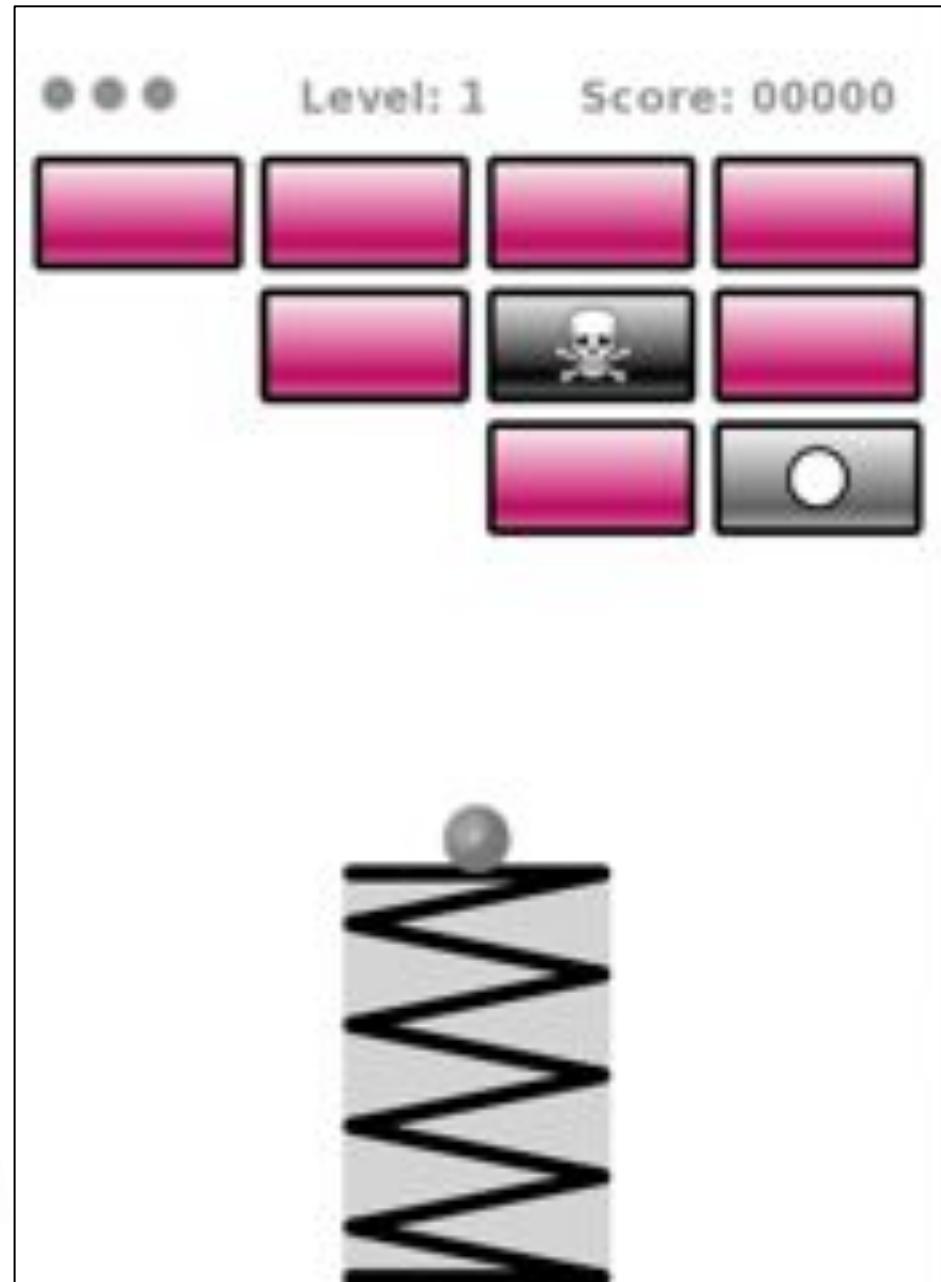

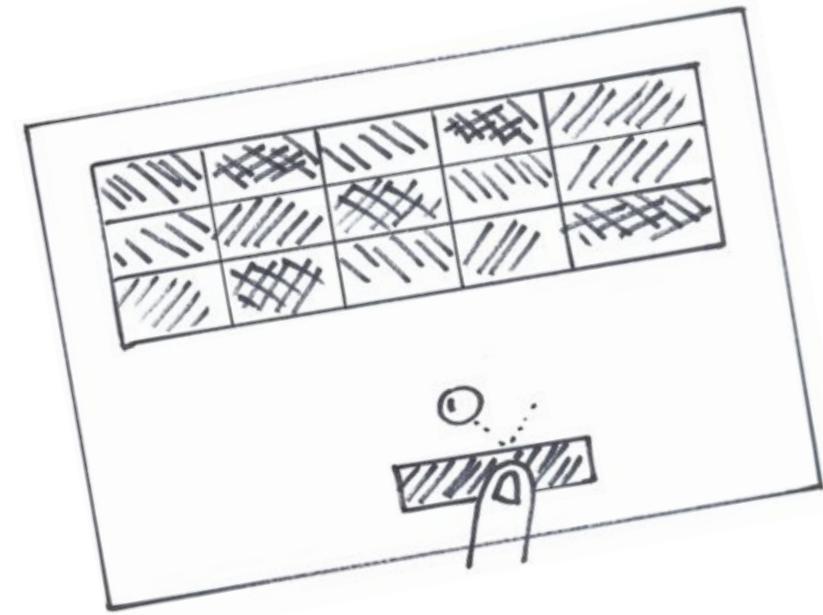

# Alarm Clock

# File Manager

# Game

# Text Editor

**she saw a boy eat his  
blue hat while his sister  
put on her apple red  
before to school going**

Please words move around  
to sentences form complete.  
Tap and drag to twice select  
end and start of selection.  
Tap and drag to move selection

# Questionnaires

**User Engagement** (10 Questions)

*based on validated scale (O'Brien & Toms, 2009)*

**Tactile Feedback** (7 Questions)

**Comparison** (5 Questions)

**Final Questionnaire** (2 Questions)

**Results**  
**positive or neutral on most ratings**

# Interviews

***“When I was moving the words against something, I could feel something squeeze back.”***

(P3, Text Editor)

***“I think it gives me accuracy, [...] if I closed my eyes I would be able to predict the amount of scrolling that I do.”***

(P5, Alarm Clock)

***“This is nice... it makes things a lot more interesting.”***

(P3, Game)

# Conclusion

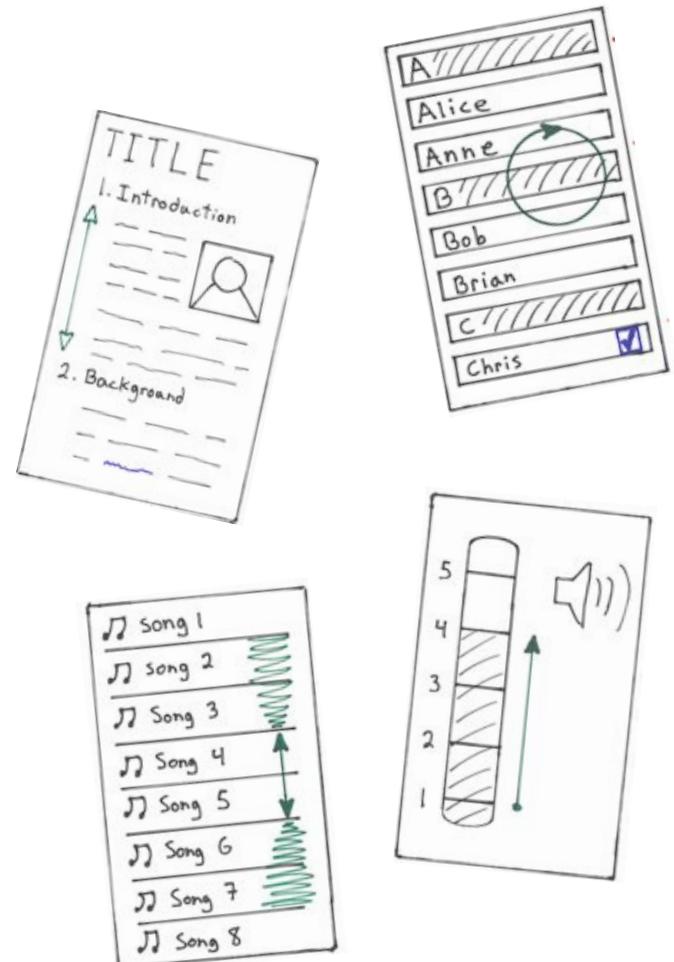

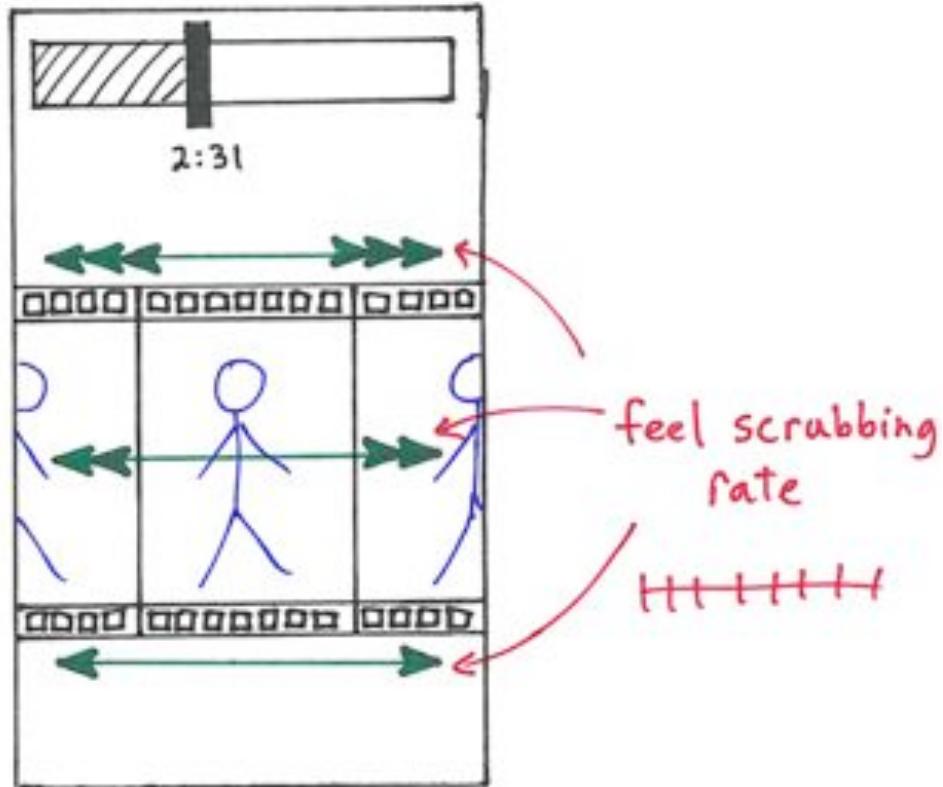

**Performance**  
improvements in target selection  
no deterioration with distractors

**User Experience**  
positive impact on enjoyment,  
engagement and realism

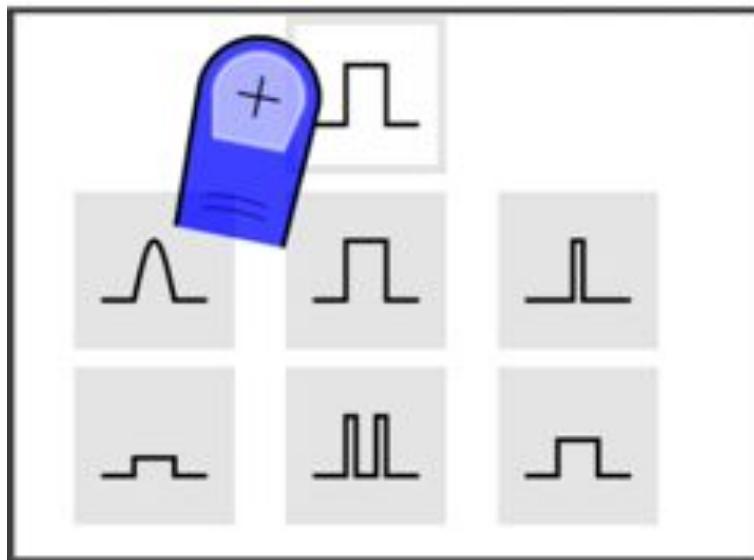

# Second Iteration

## Scrolling Interactions

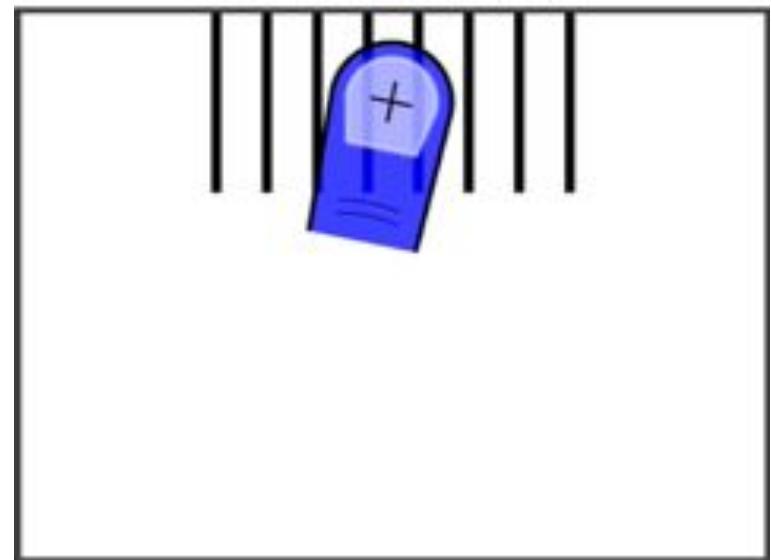

# Short Experiments

## 1 – detent identification

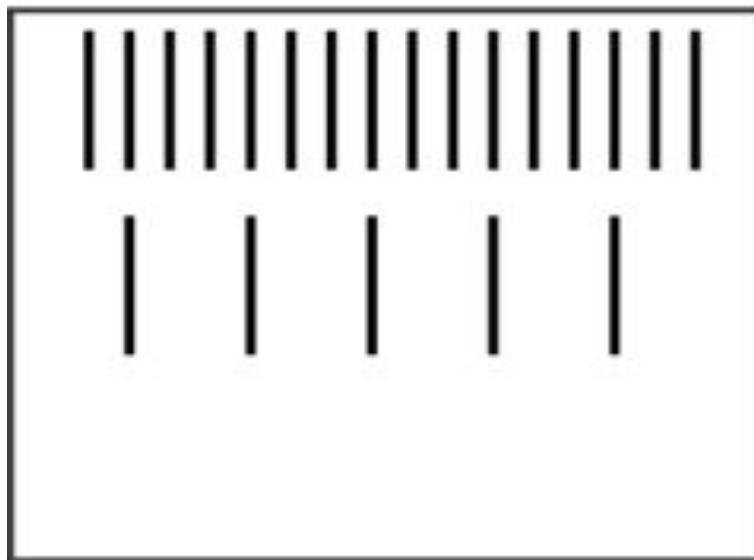

## 2 – detent counting

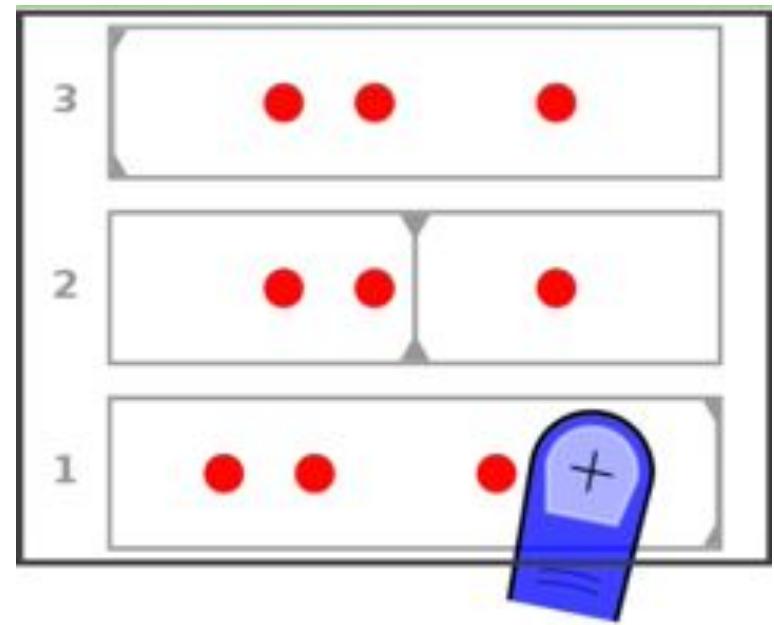

# Short Experiments

## 3 – rate judgment

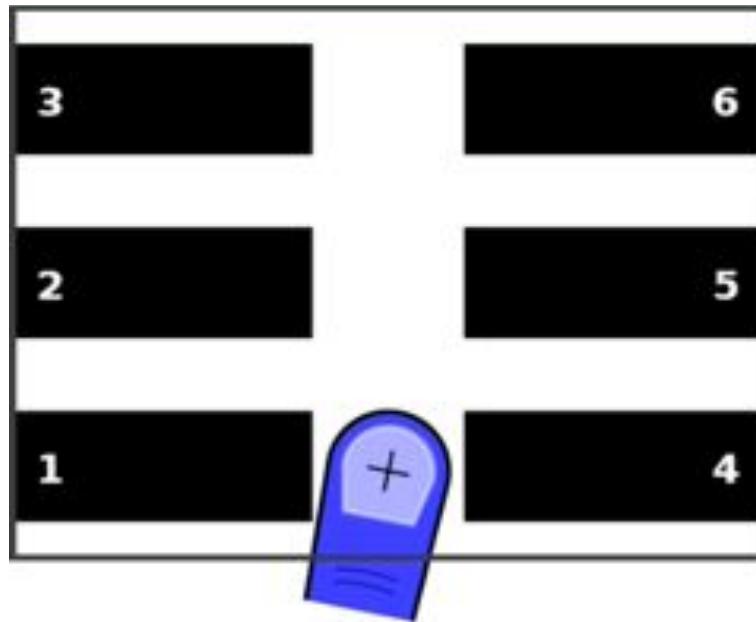

## 4 – feedback location

# Short Experiments

## 5 – resistance

# Design Guidelines

- 1 Use few **distinct detents** for precise or fast identification.
- 2 Expect **counting** to be **imprecise**.
- 3 Leverage **detent density** perception.
- 4 Trigger feedback at the screen's **center**; reinforce with visuals.
- 5 Augment rate controllers with **spring-like resistance**.

# **Conclusion**

**Seek collaborations!**

**Brainstorm, sketch, prototype!**

**Test what matters!**

**Give demonstrations!**

# For more information...

## Short Talk – Monday 9:00

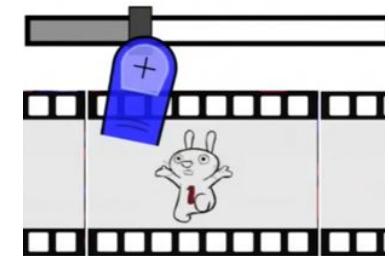

Adaptive Level of Detail in Dynamic, Refreshable Tactile Graphics  
Vincent Levesque, Gregory Petit, Aude Dufresne, Vincent Hayward

## Long Talk – Monday 9:35

Exploring the Design Space of Programmable Friction for Scrolling Interactions  
Vincent Levesque, Louise Oram, Karon MacLean

## Demonstration 32

Programmable Friction in Scrolling Interactions  
Vincent Levesque, Louise Oram, Karon MacLean
