

Haptics Symposium

Workshop on Haptic Interaction Design

March 3, 2012, Vancouver, Canada

Haptic Interaction Design based on Users Experience

Monica Bordegoni, Umberto Cugini
Francesco Ferrise, Joseba Lizaranzu

Dipartimento di Meccanica
Politecnico di Milano, Italy

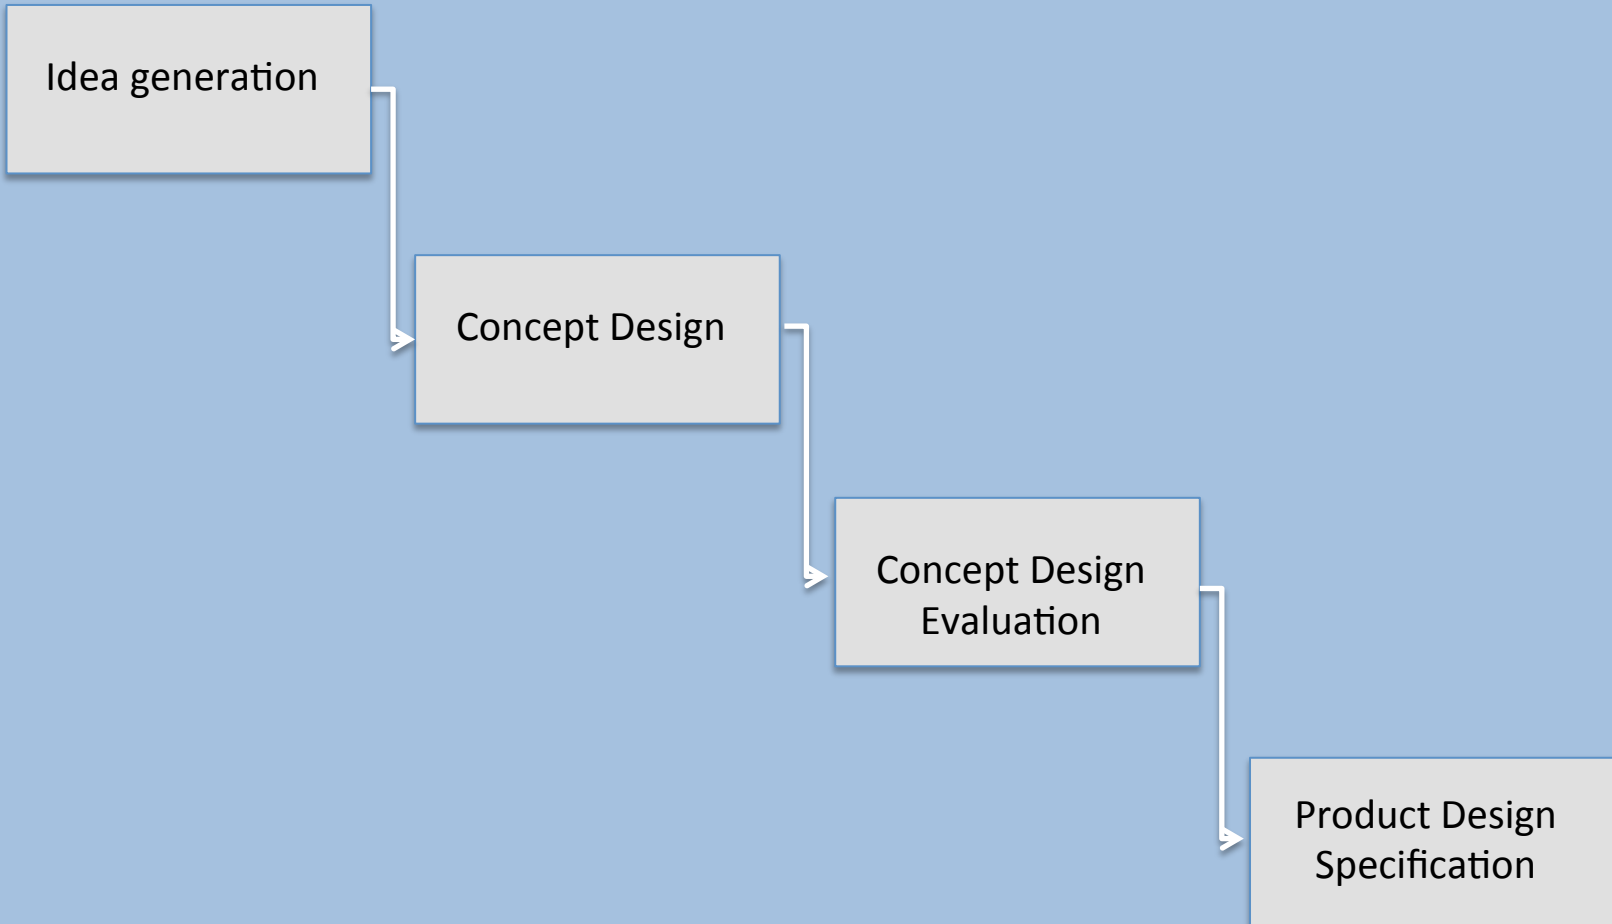

Haptic Interaction Design

is that phase of product development where the interaction with a product that occurs through touch and manual control is designed

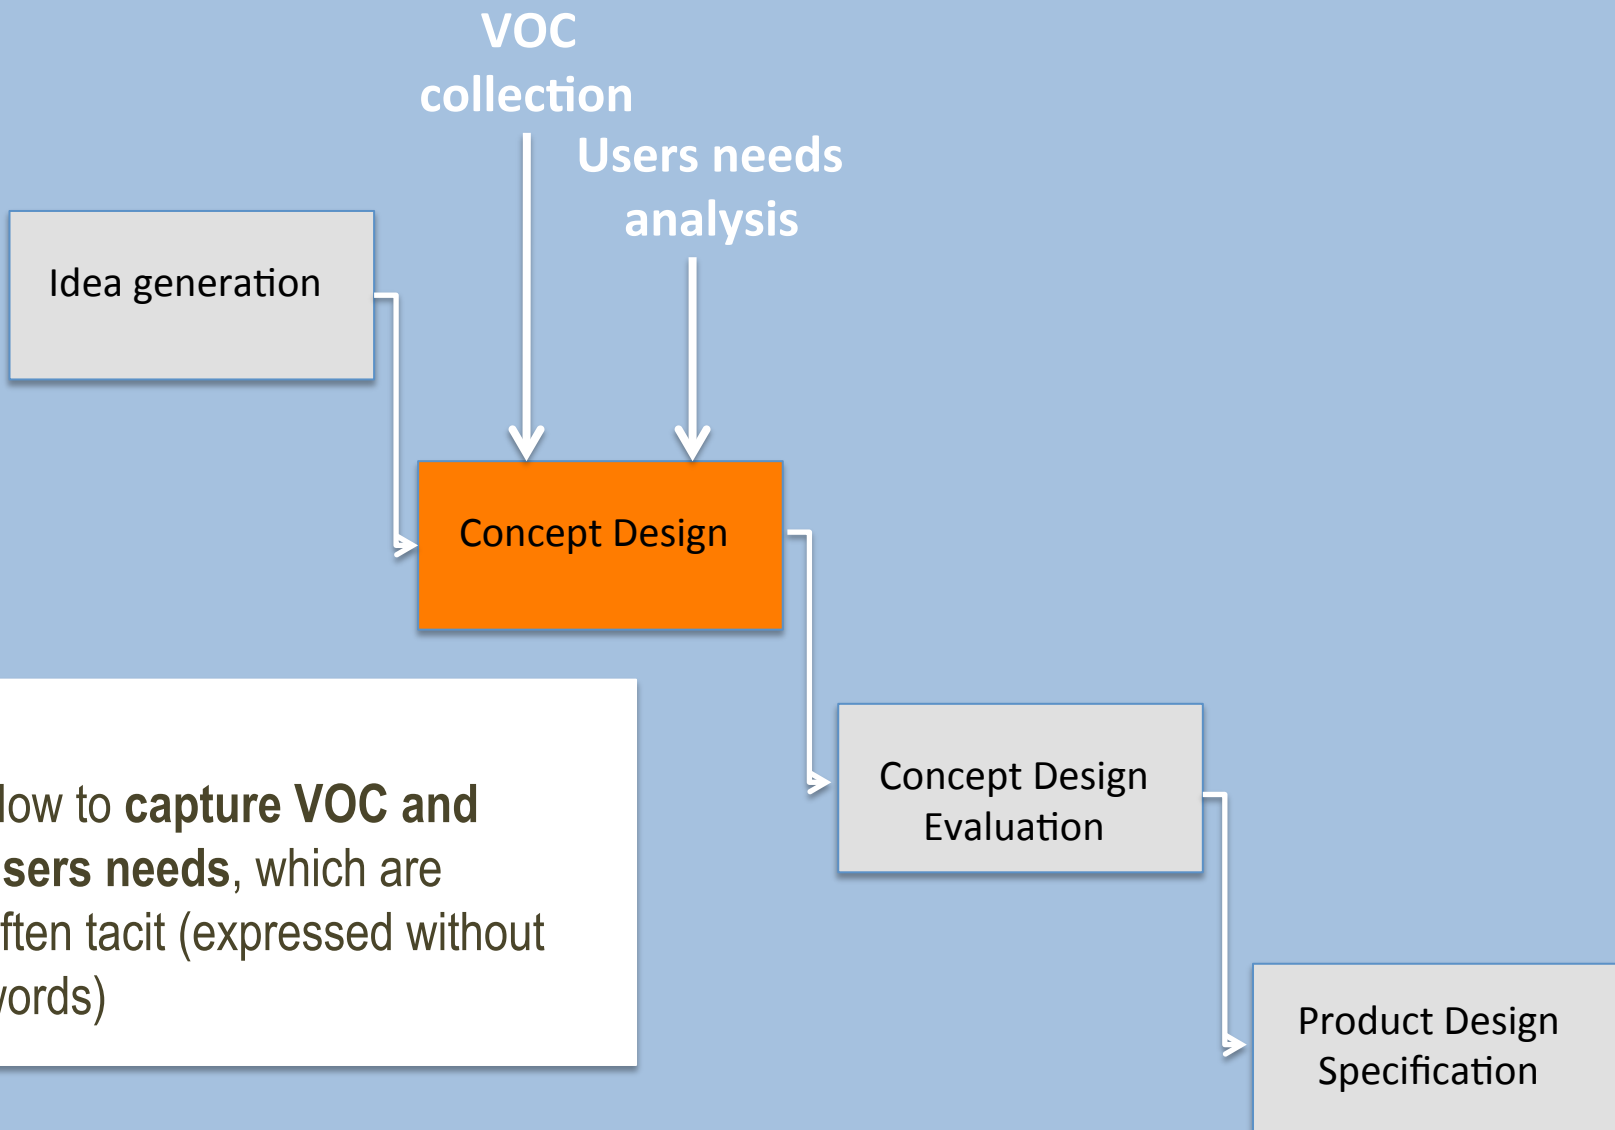

Key steps in new product development

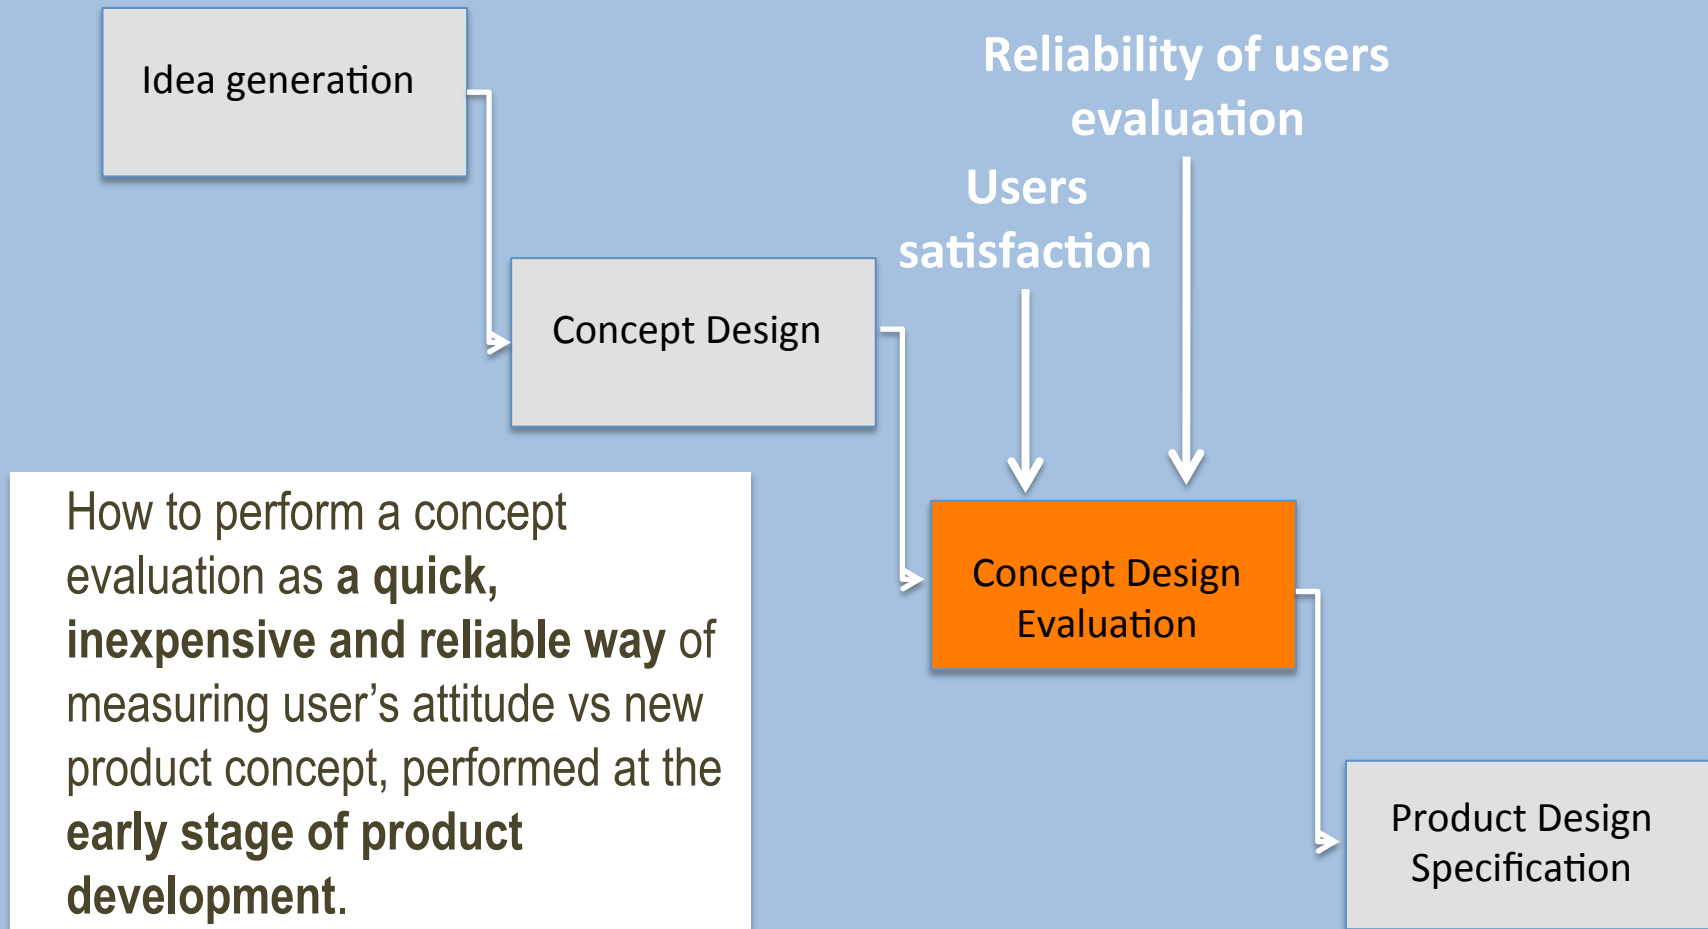

Key steps in new product development

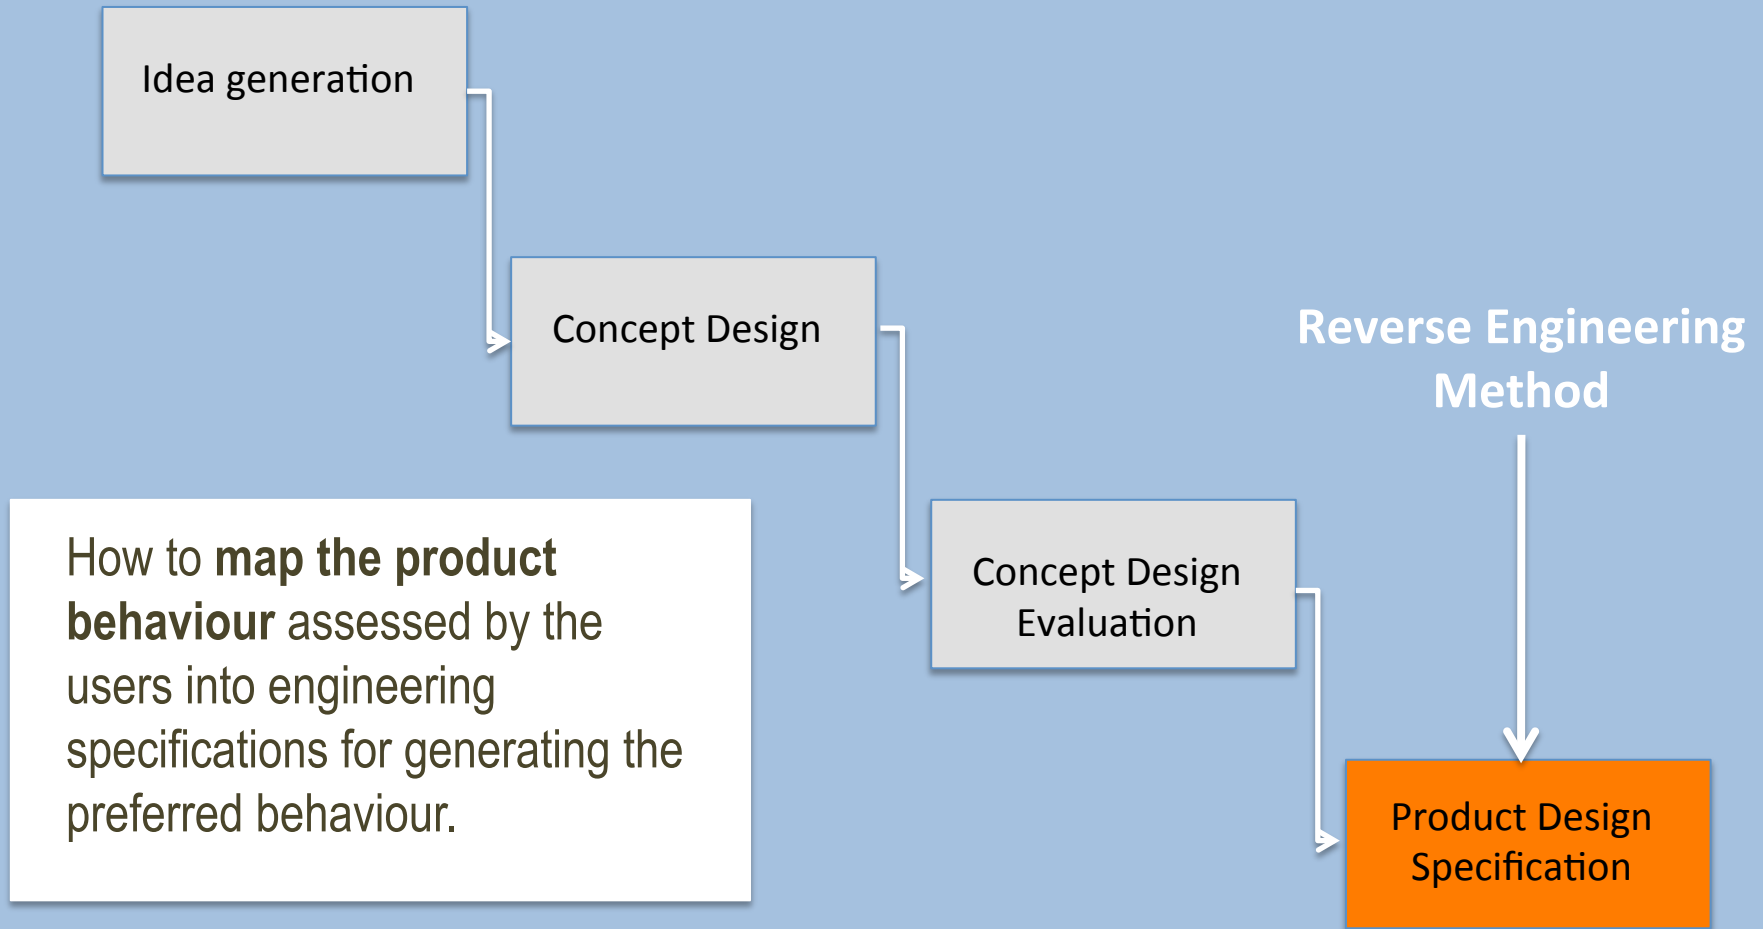

Key steps in new product development

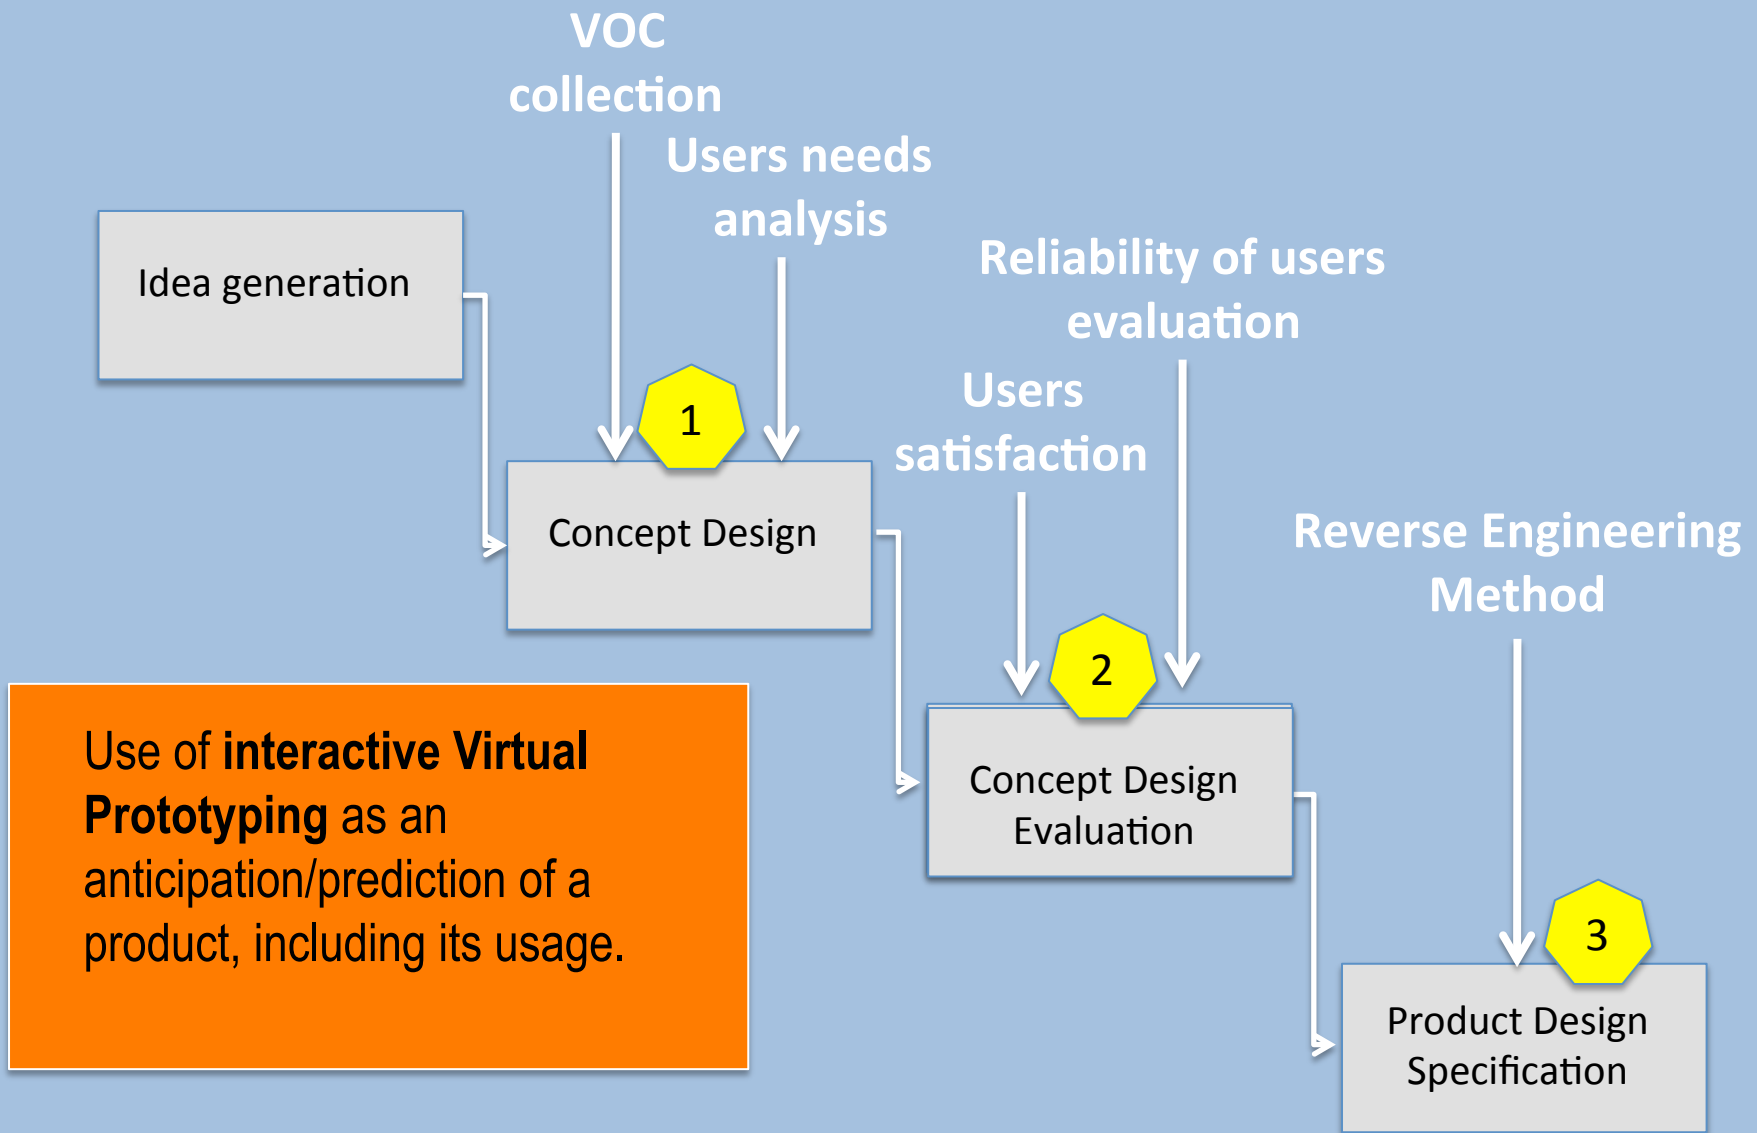

Key steps in new product development

Proposed Methodology: iVP

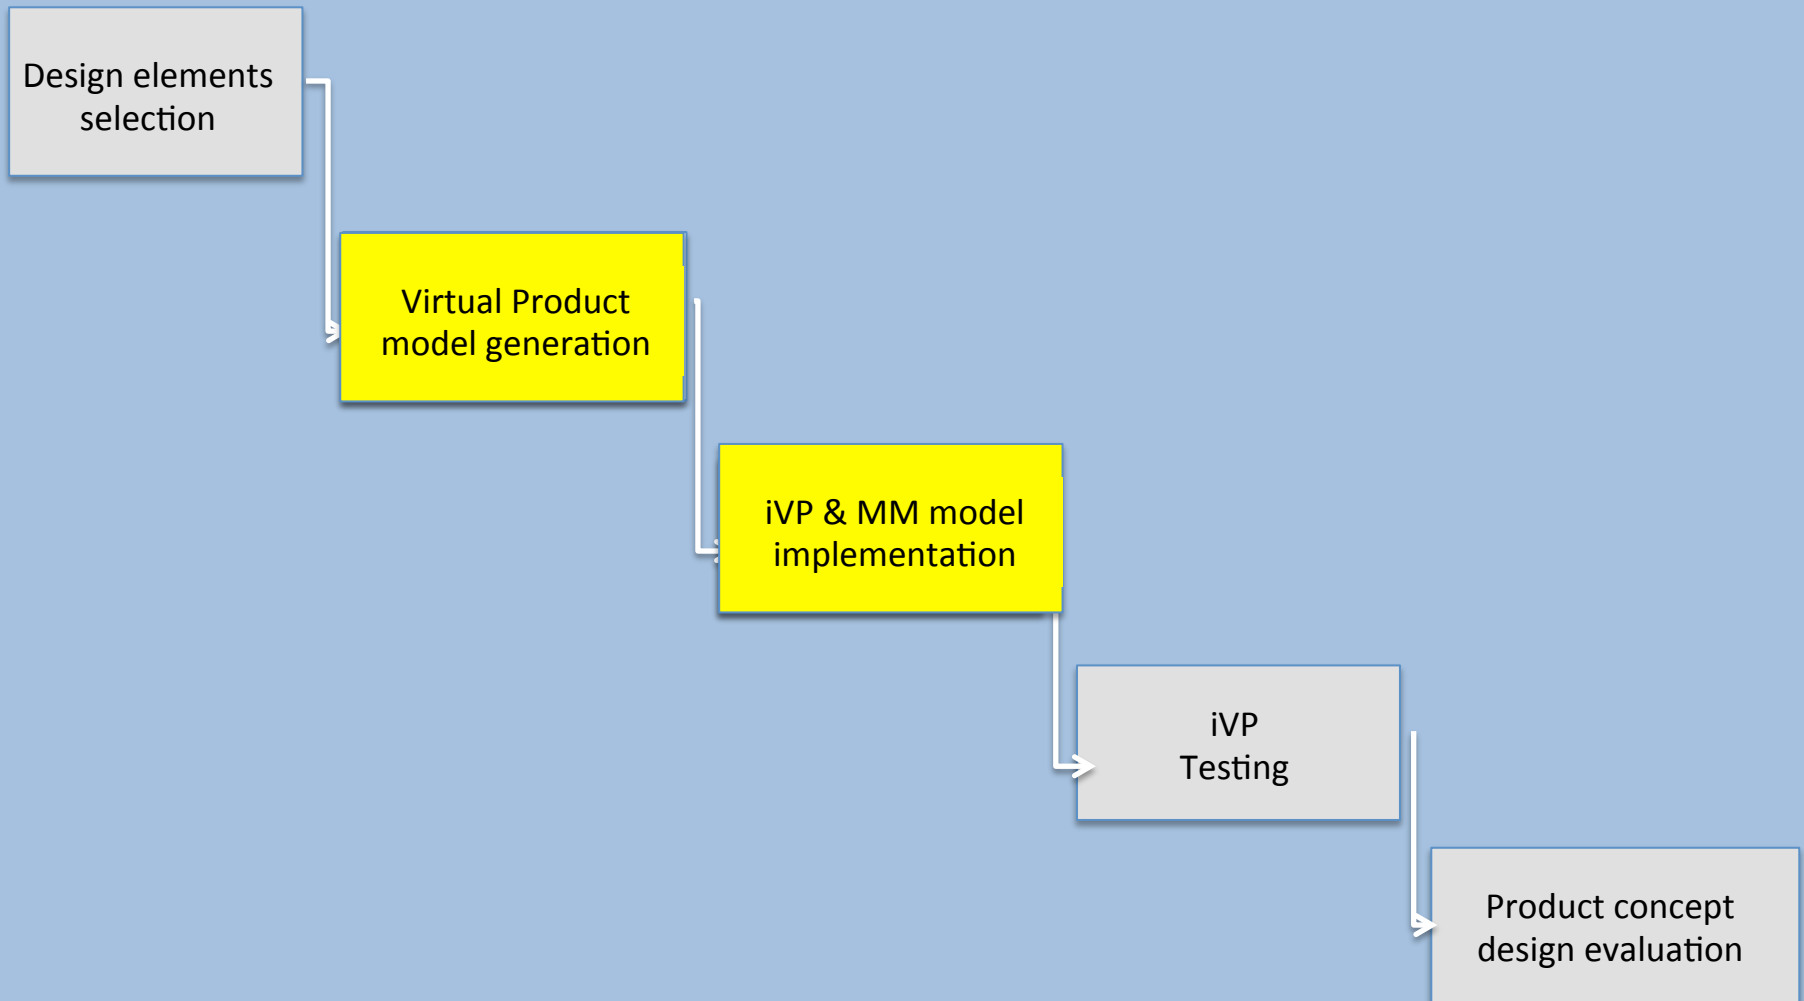

interactive Virtual Prototyping: what it is

- Anticipation of a product
 - VP creates stimulus material that enables users to experience a new product well before it exists in reality
- iVP allows **experience prototyping**, which is a method that focuses on how a task or a situation is experienced with the main purpose
 - to gain understanding of users and their experiences in a **real/realistic** world context and
 - to evaluate and **communicate design** ideas
- iVP is an extremely **powerful methodology&tool** in gaining user insights early in the design process

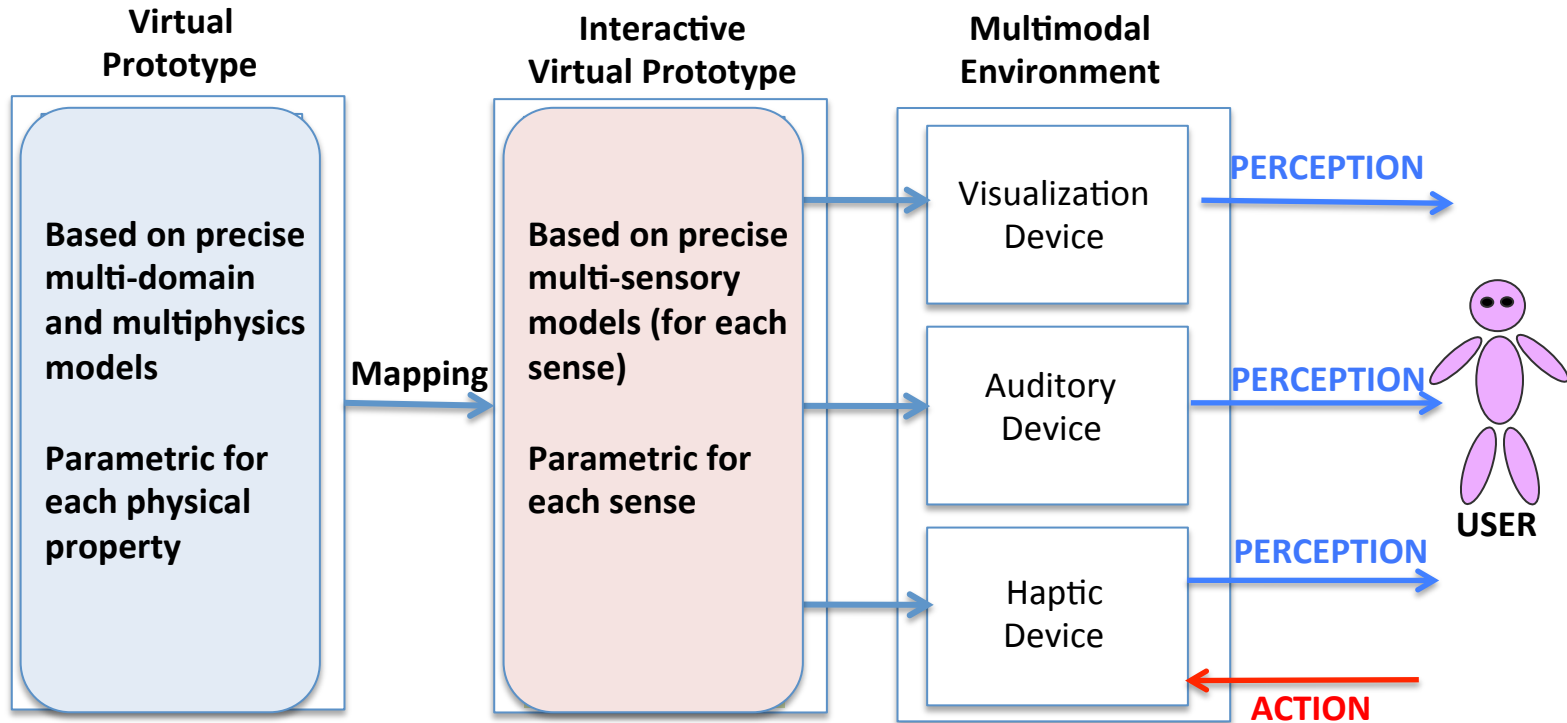

interactive Virtual Prototyping – iVP methodology

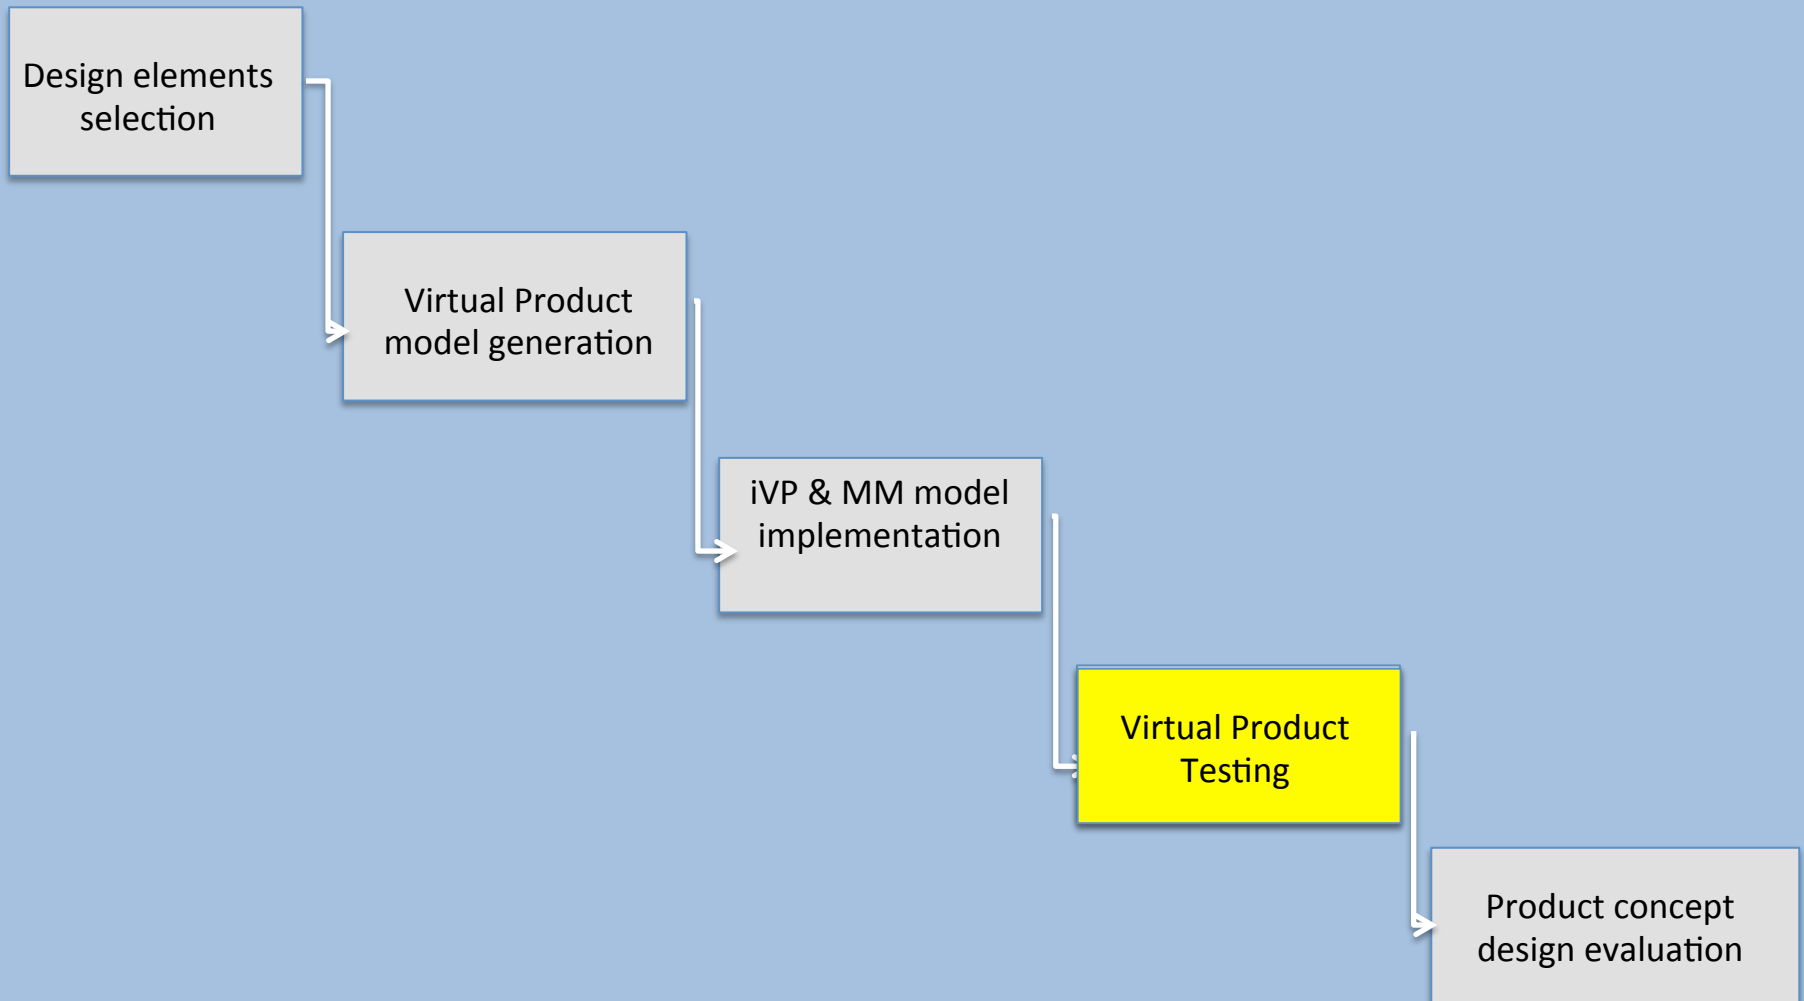

Traditional Design Flow

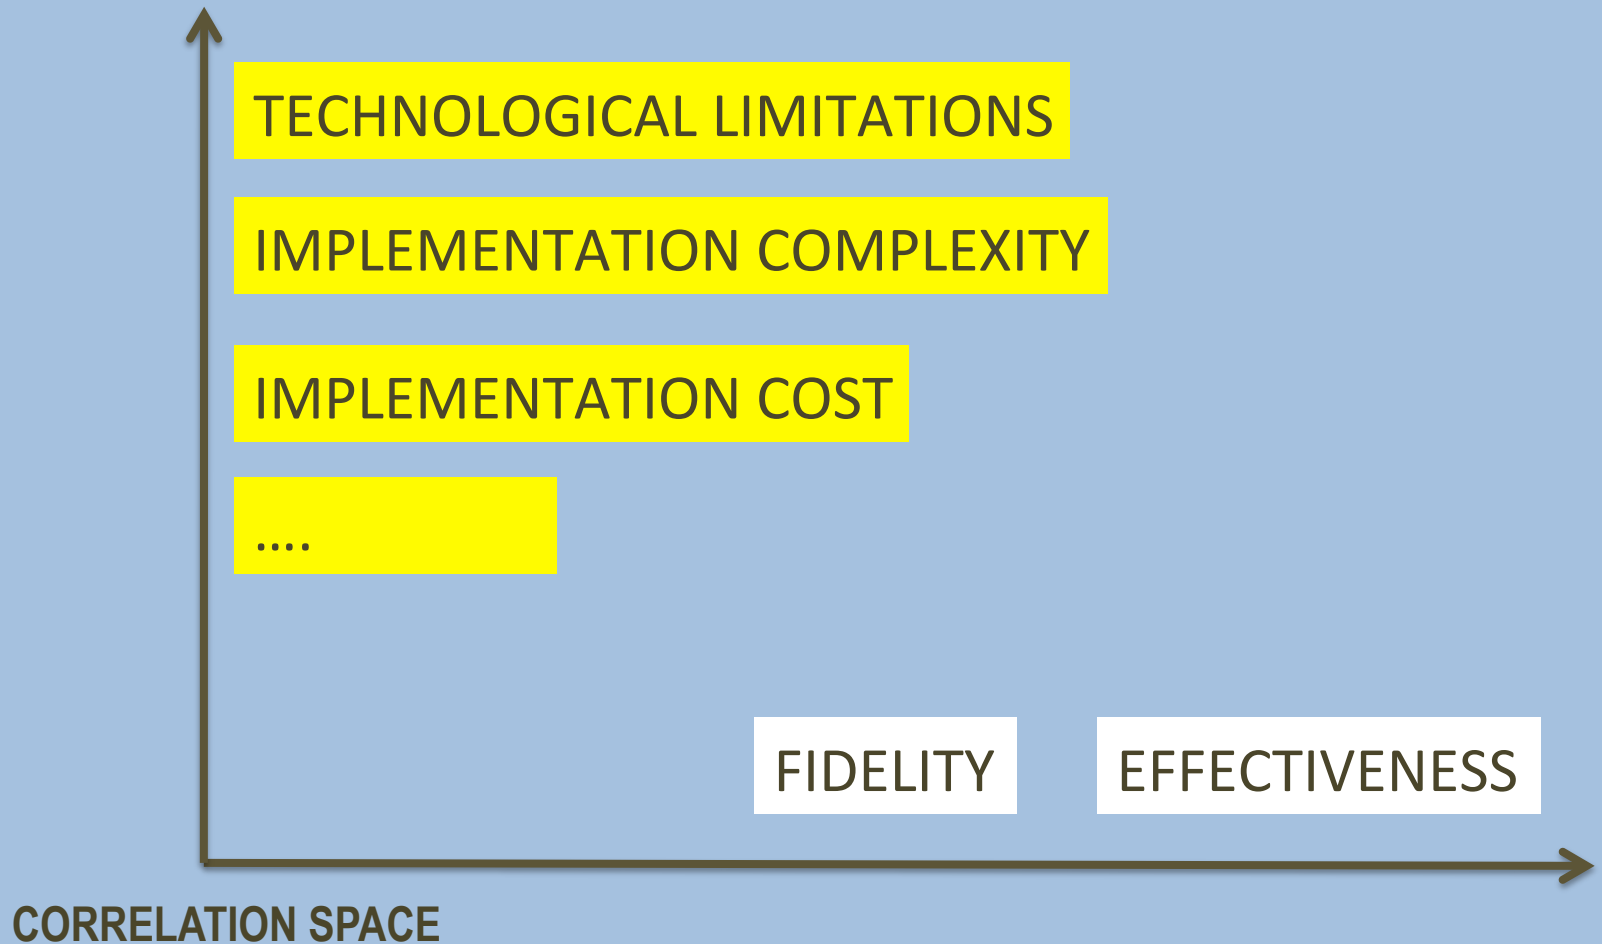

iVP methodology

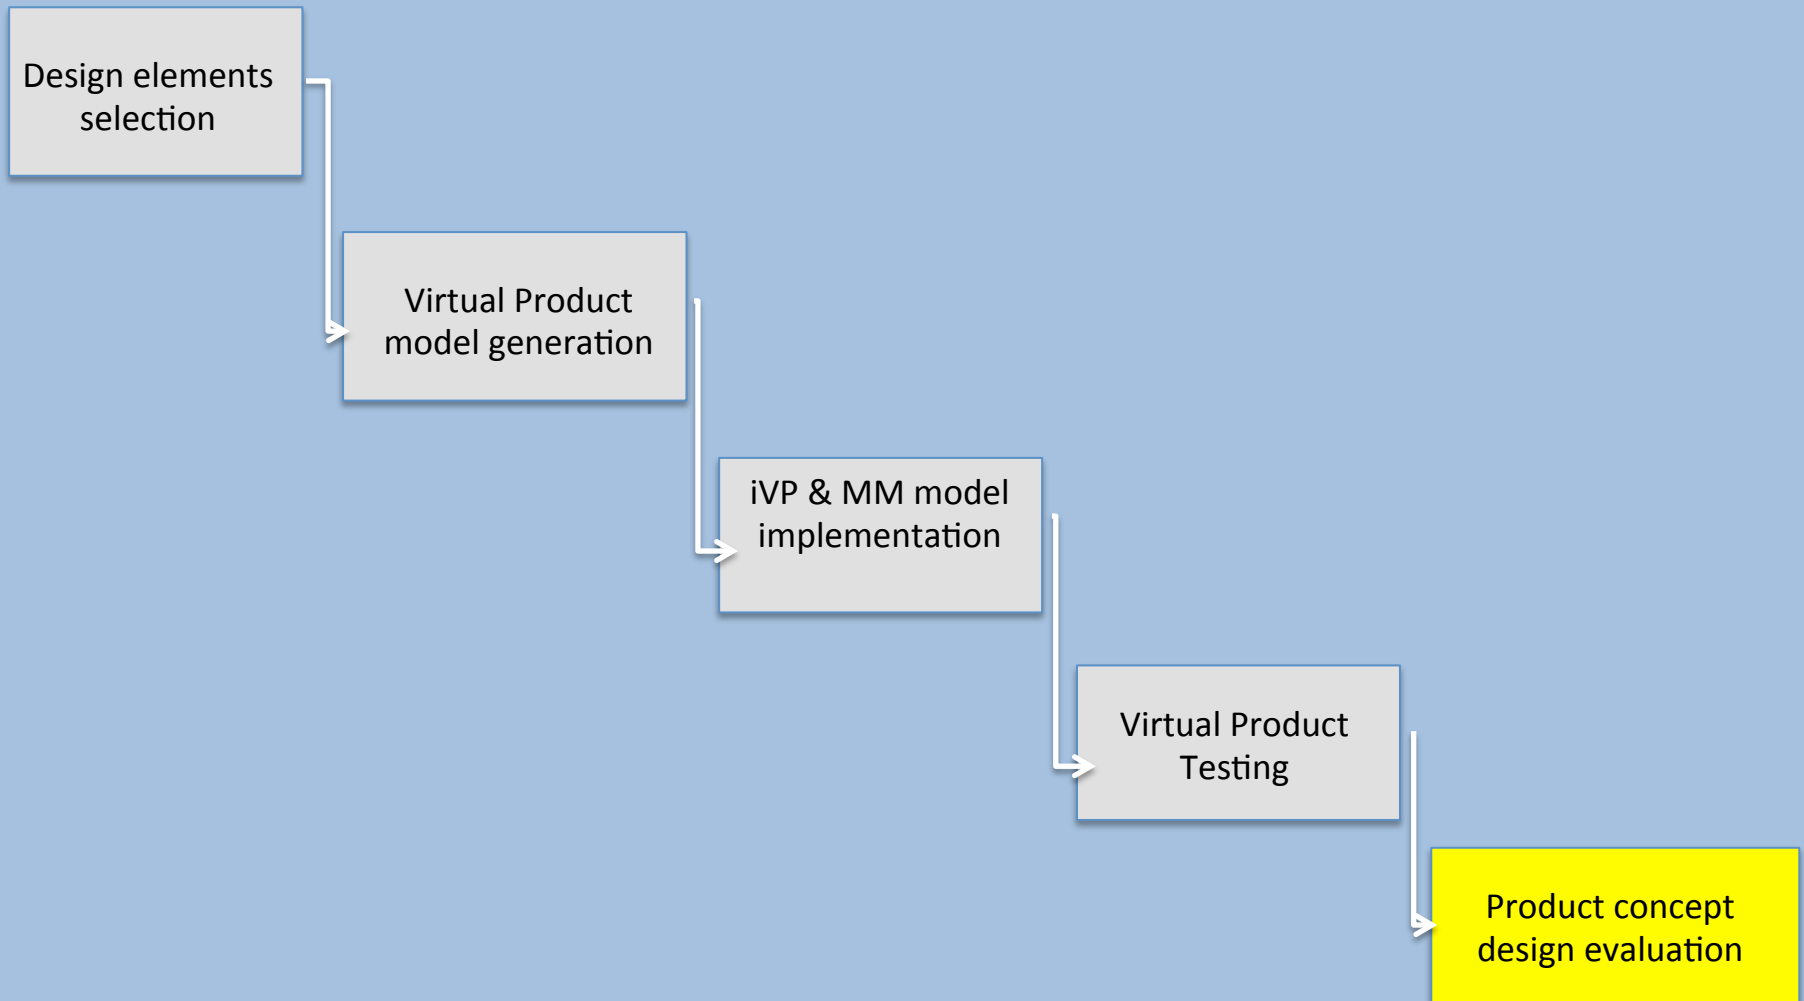

Virtual Product Testing

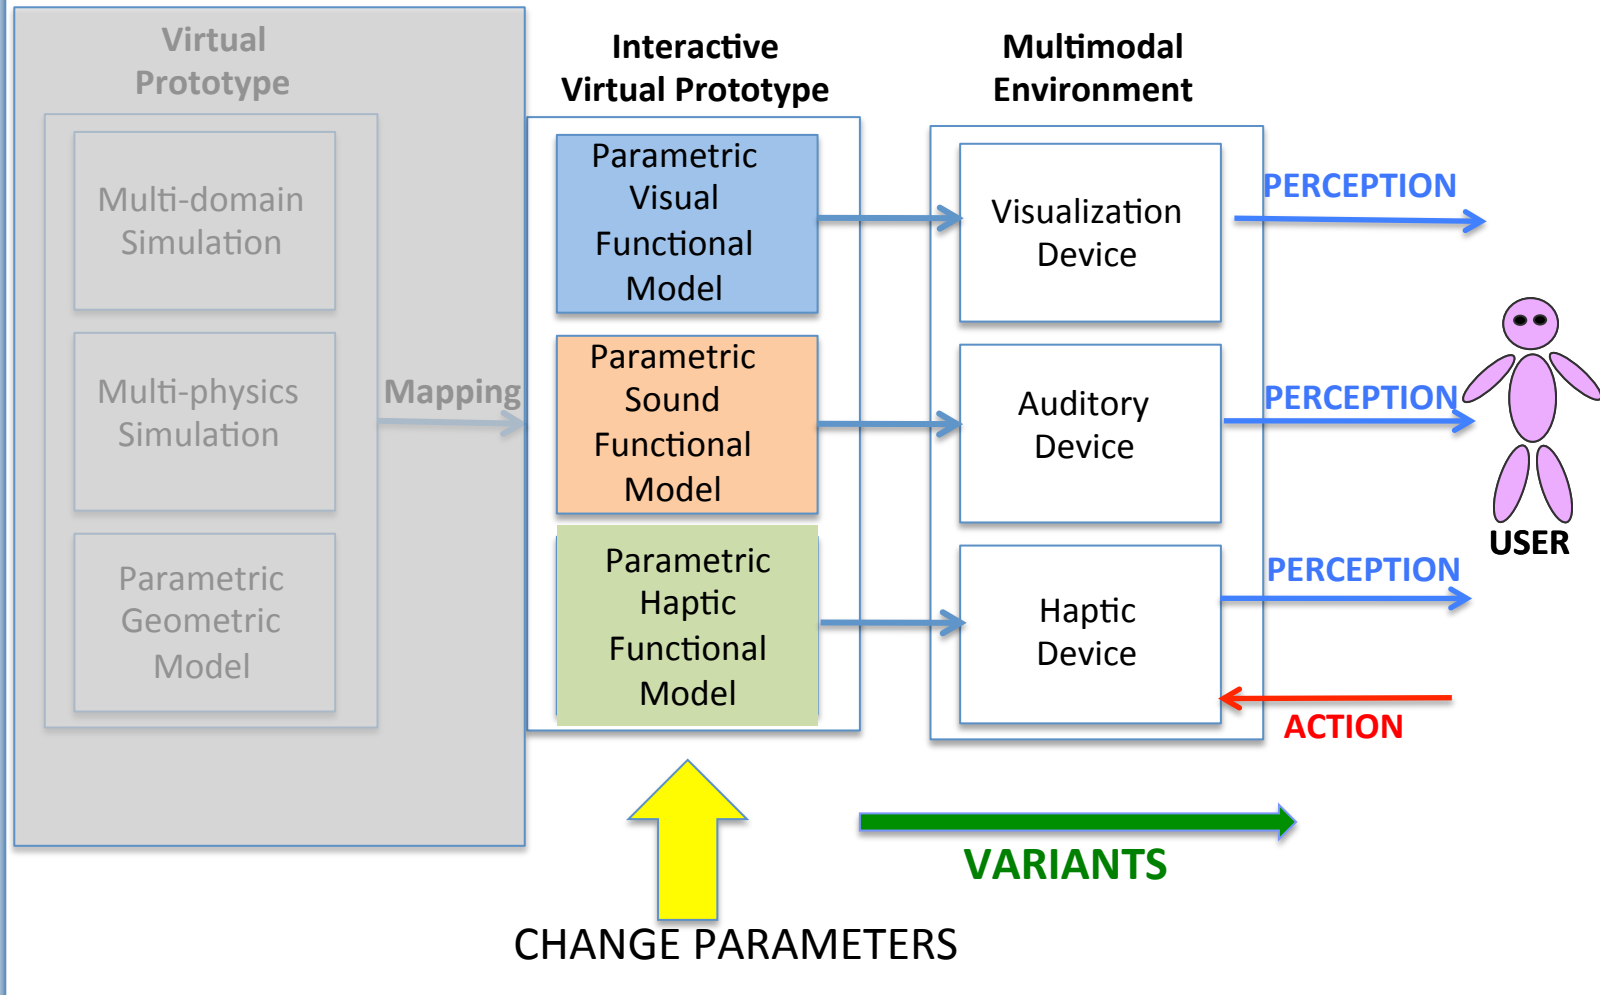

iVP methodology

Traditional Design Flow

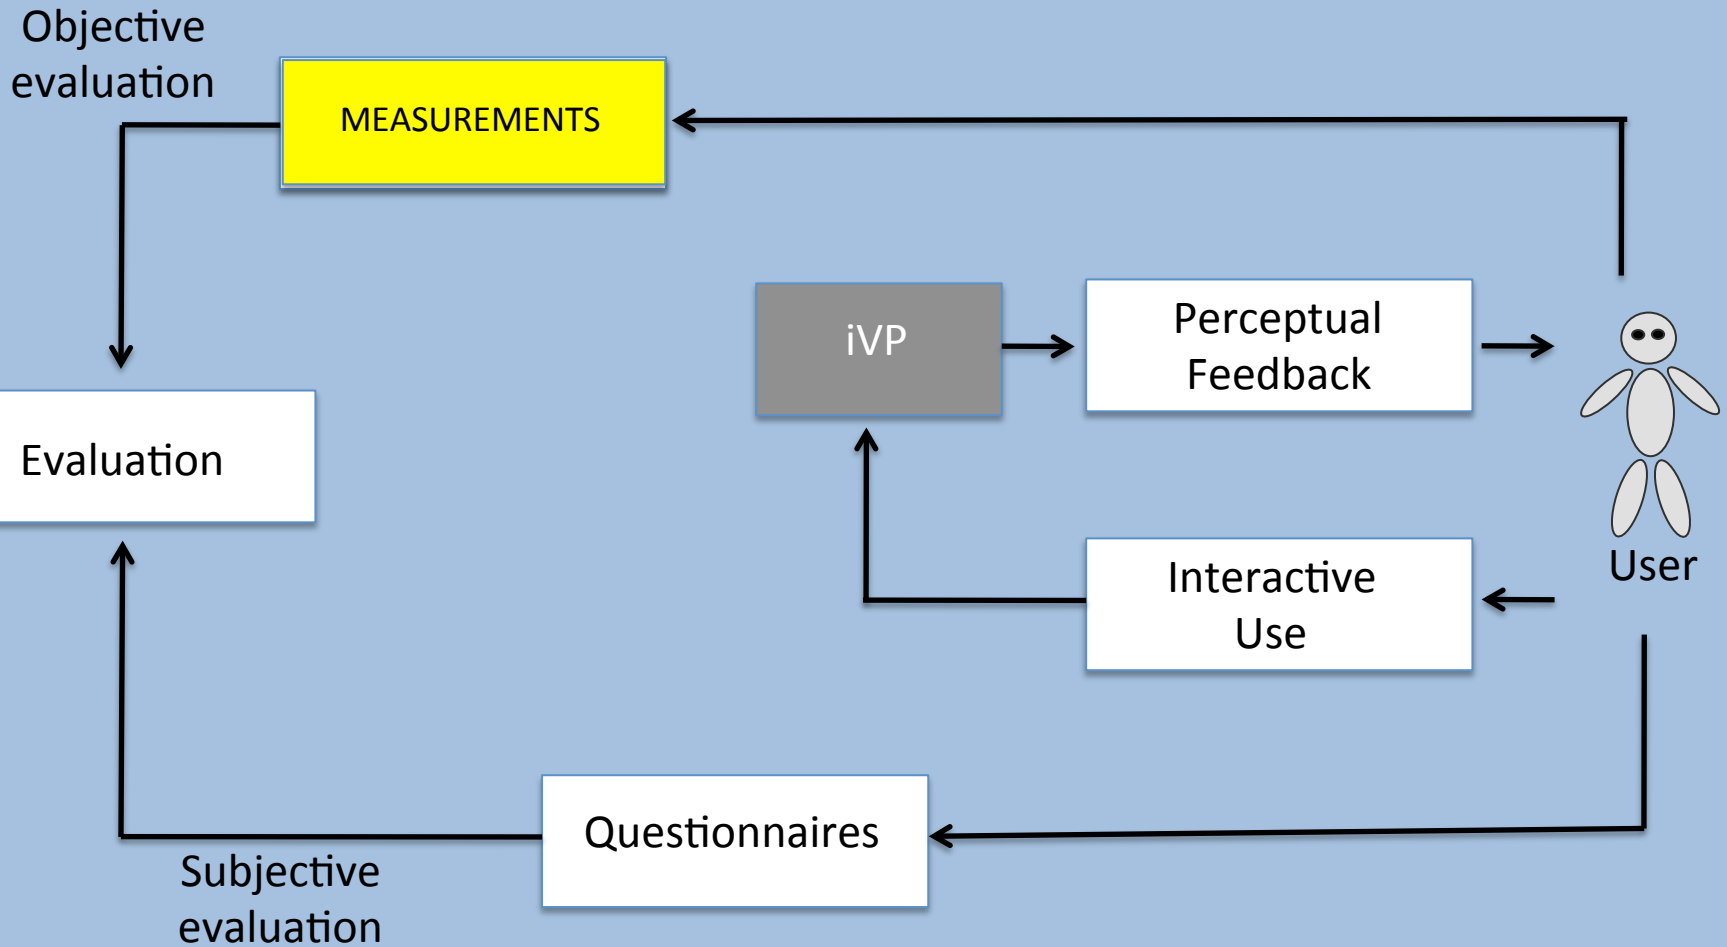

Evaluation Protocols

- What influences the **Performance**
 - Skill level
 - Task performance
 - Learning efficiency
 - Usability
 - Reliability
 - Comfort
- Potential Customers **Impressions**
 - Satisfaction
 - Feelings
 - Emotional involvement/engagement
 - Empathy (emotional relationship)
 - Perceived product quality
 - Expectations satisfaction

Evaluation methodology

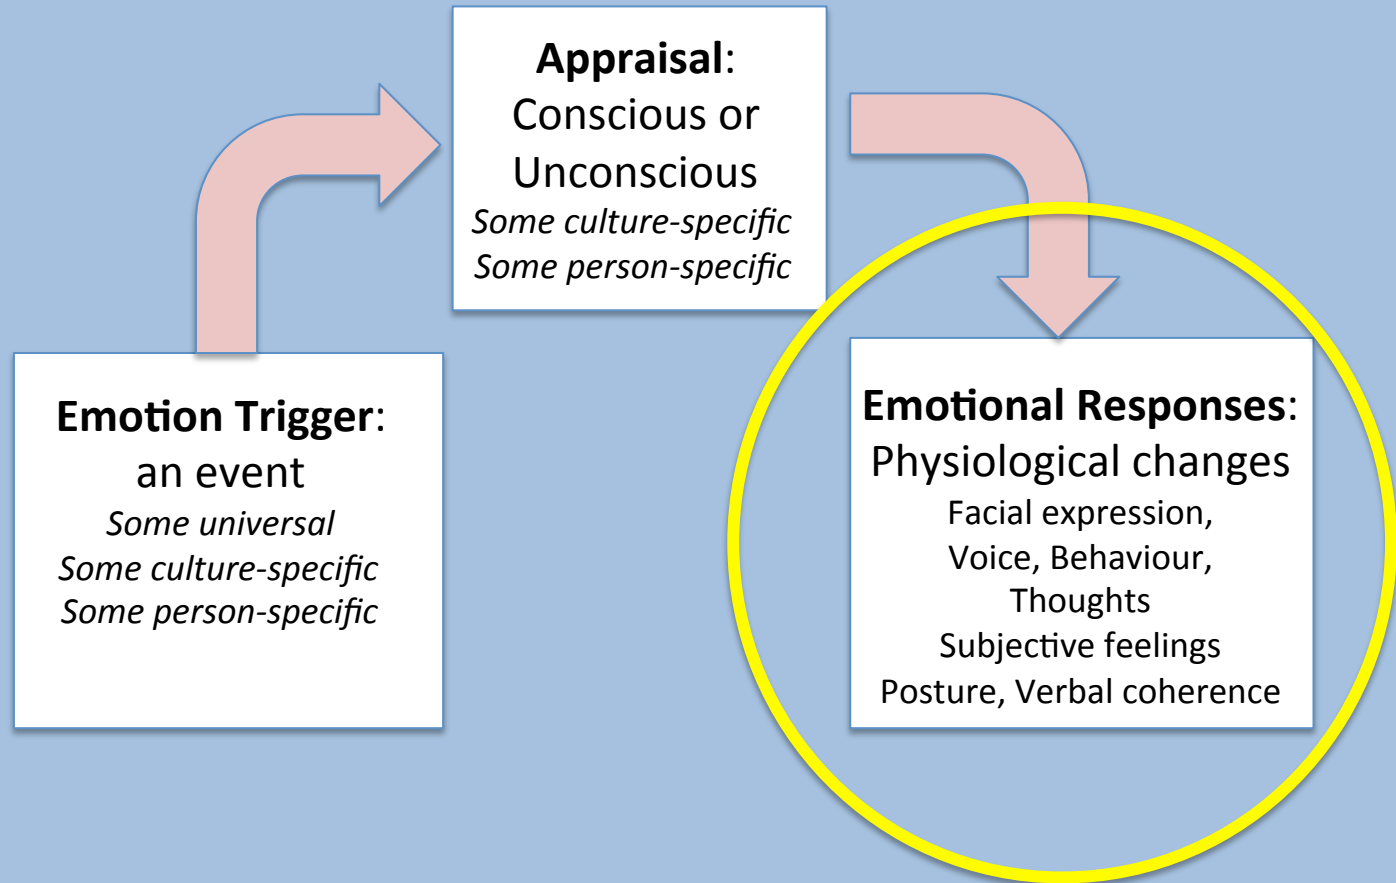

Measurement methods: Performance

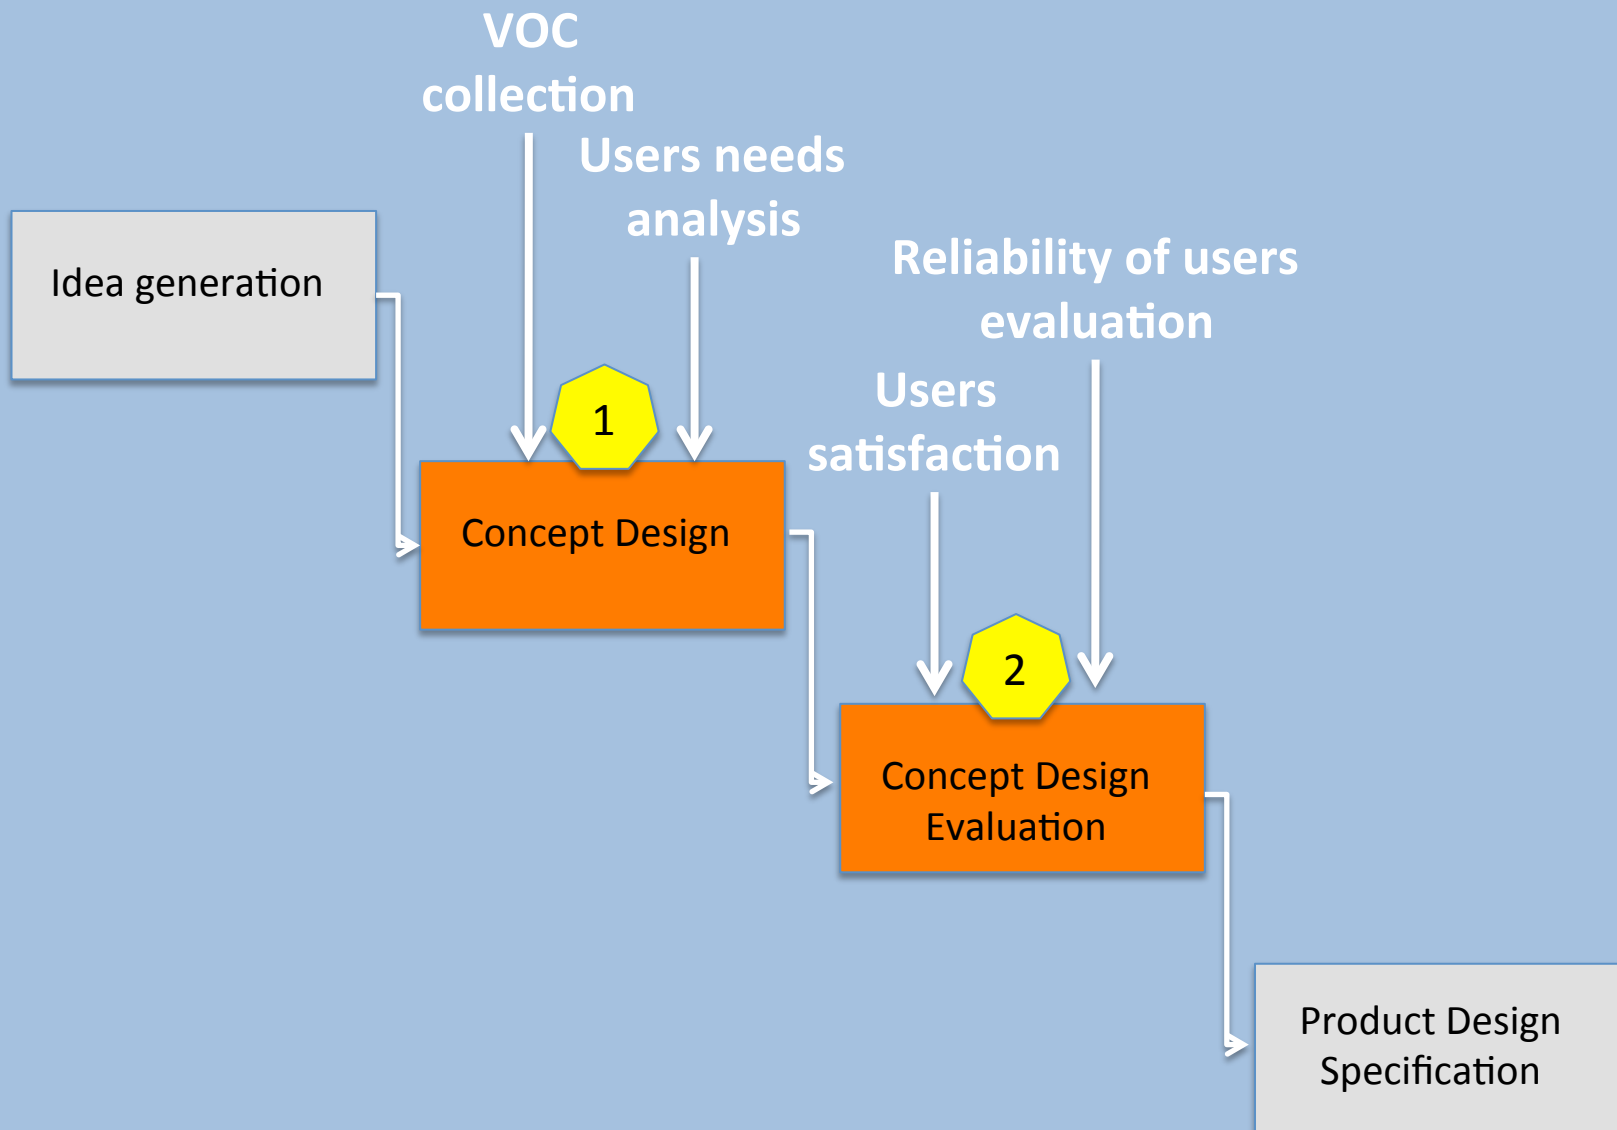

Behavioral data: pressure, posture, movements

Measurement methods: Emotional engagement

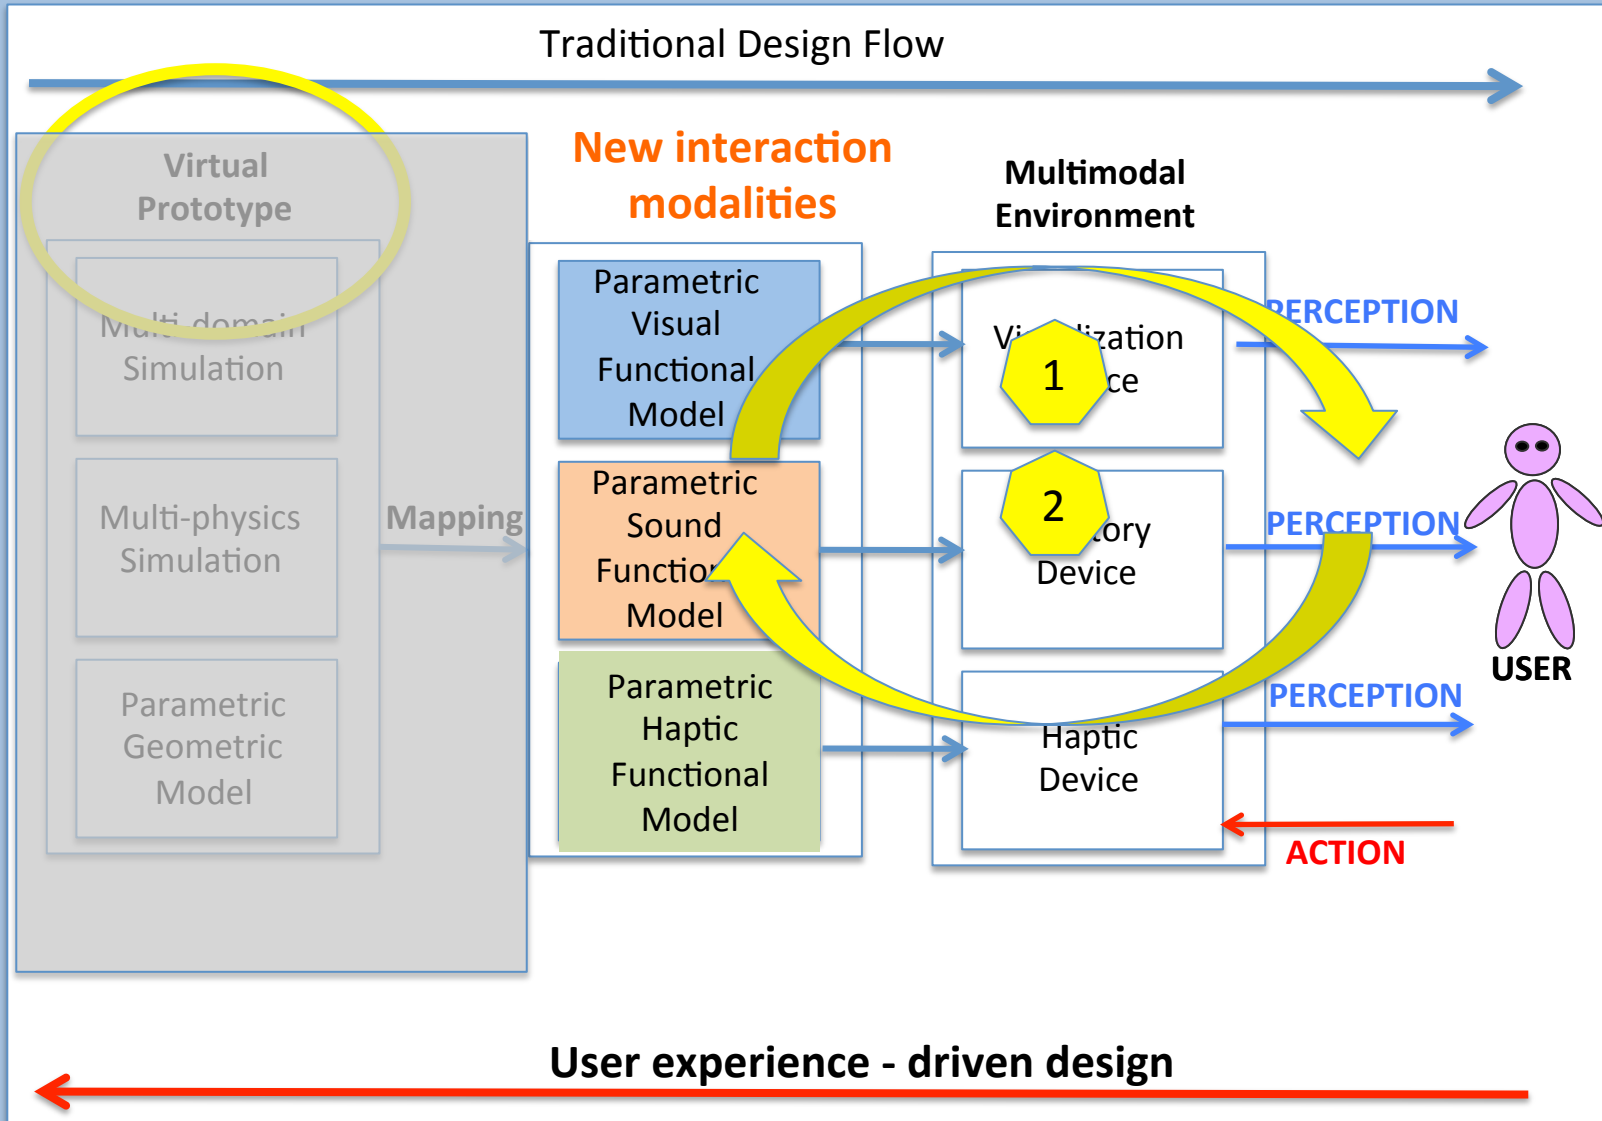

Key steps in new product development

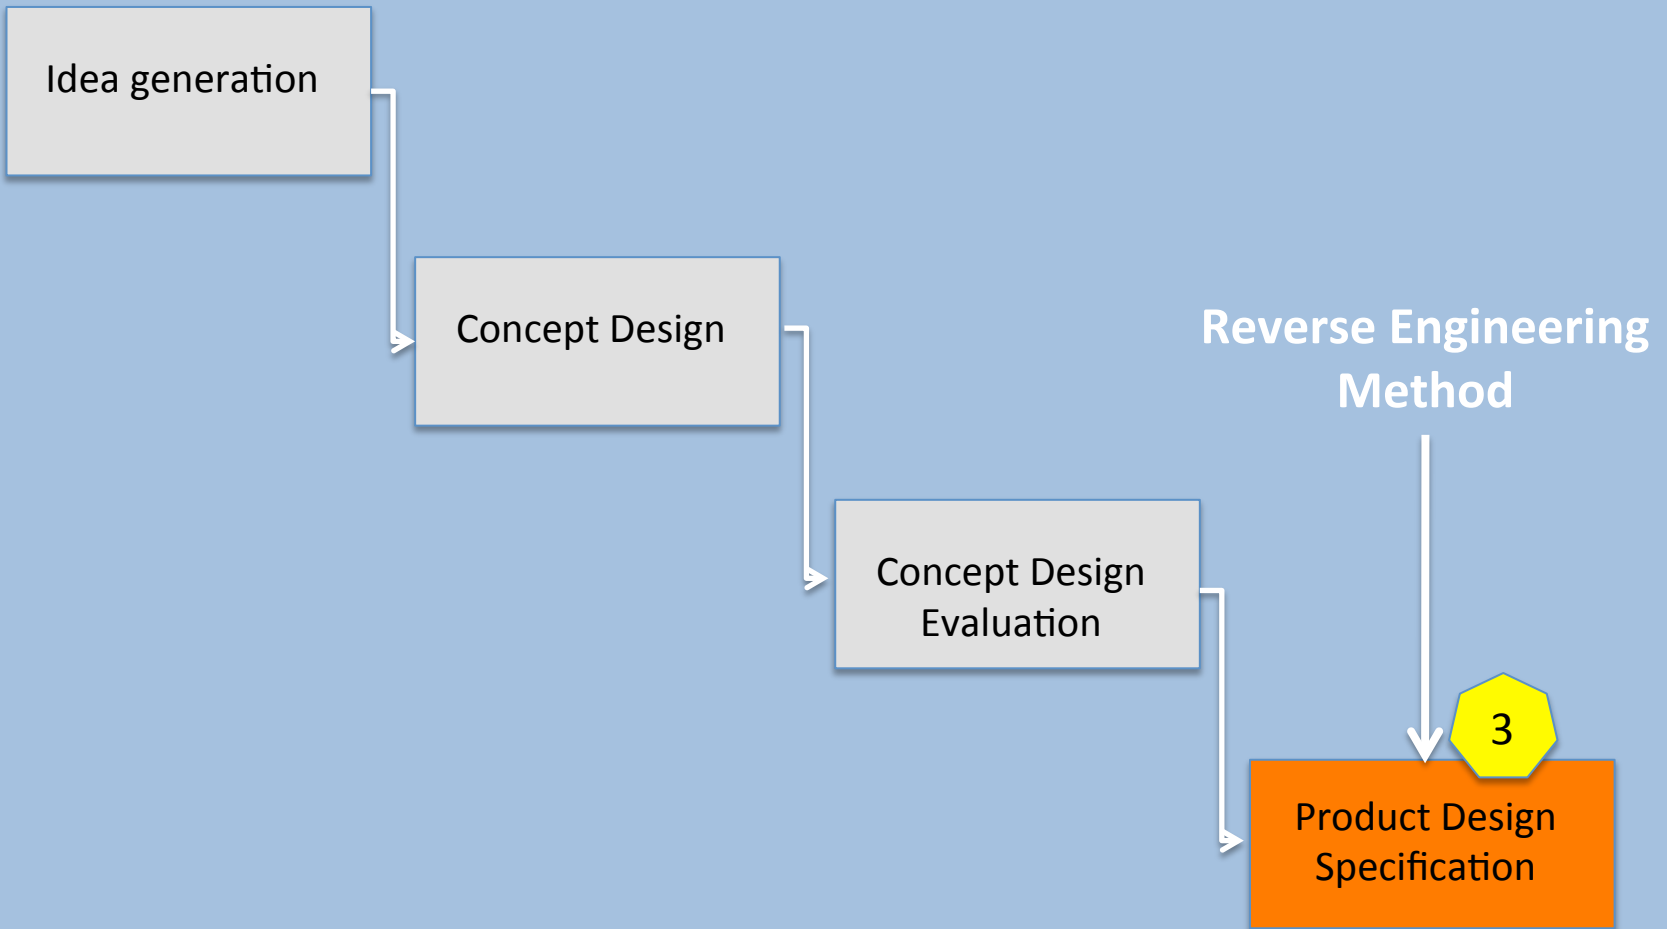

iVP: answers to questions 1 - 2

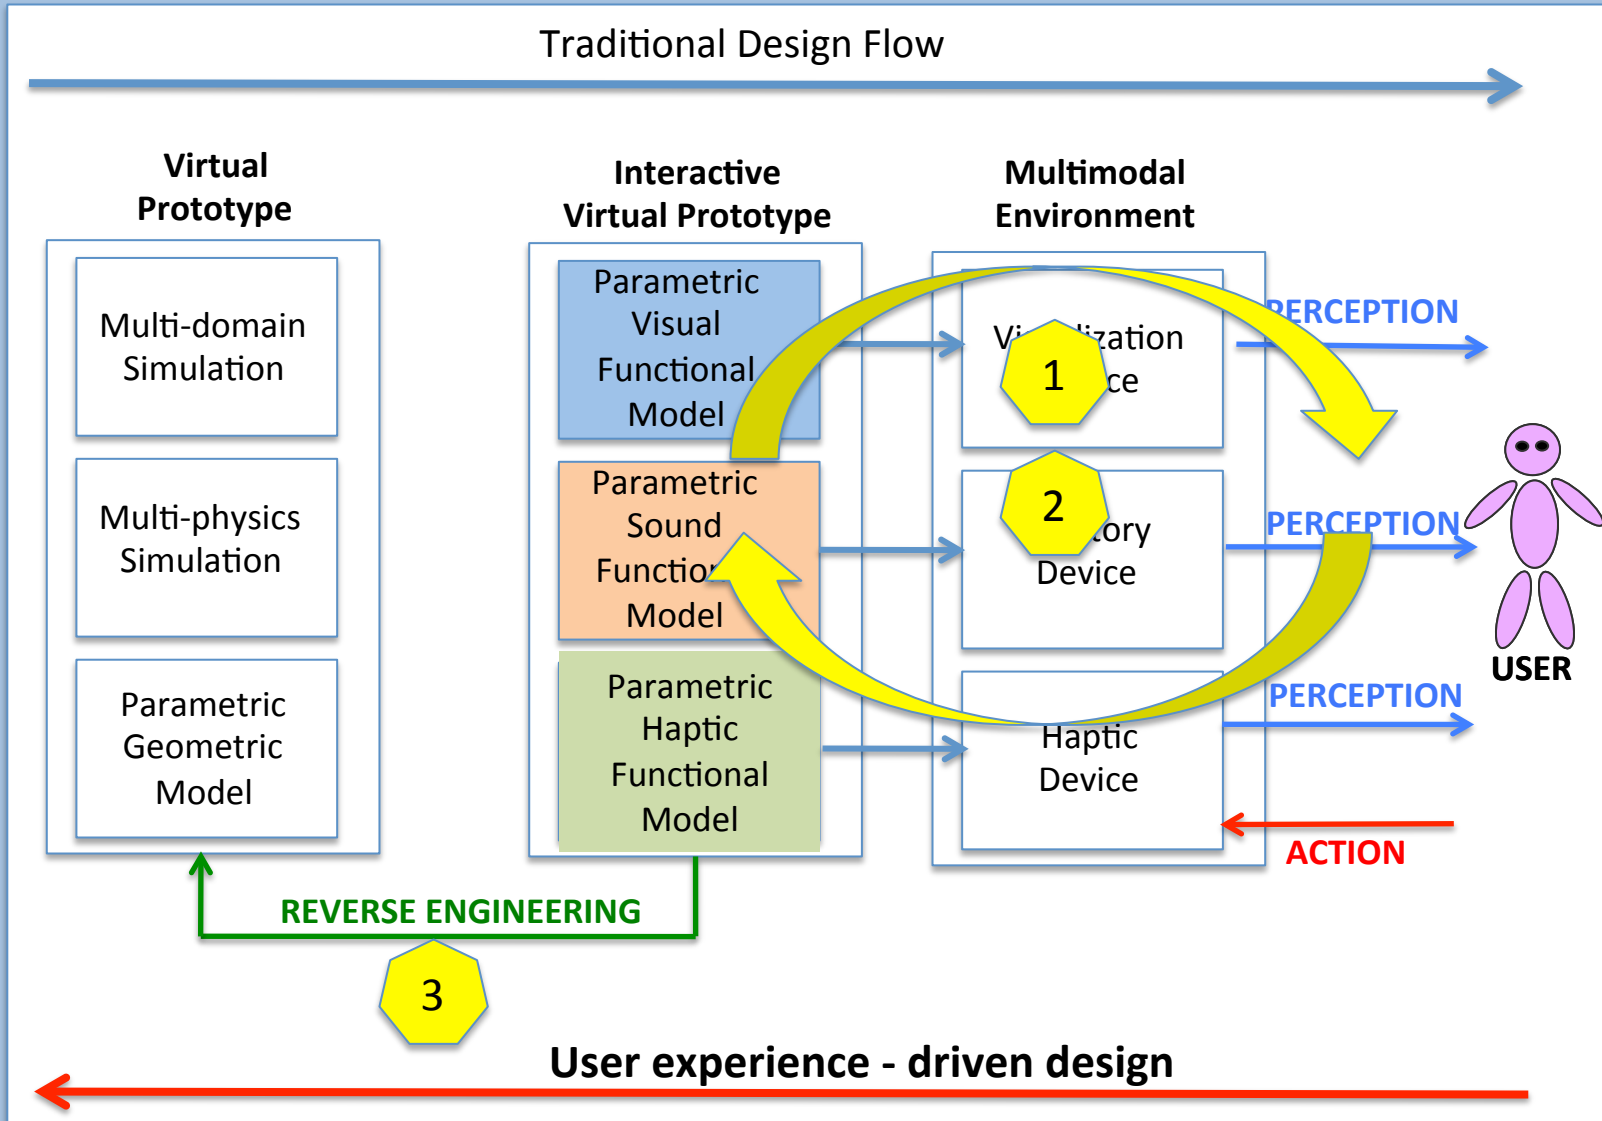

Key steps in new product development

iVP: answers to question 3

Case Studies
